

17th Current Issues in Life Assurance

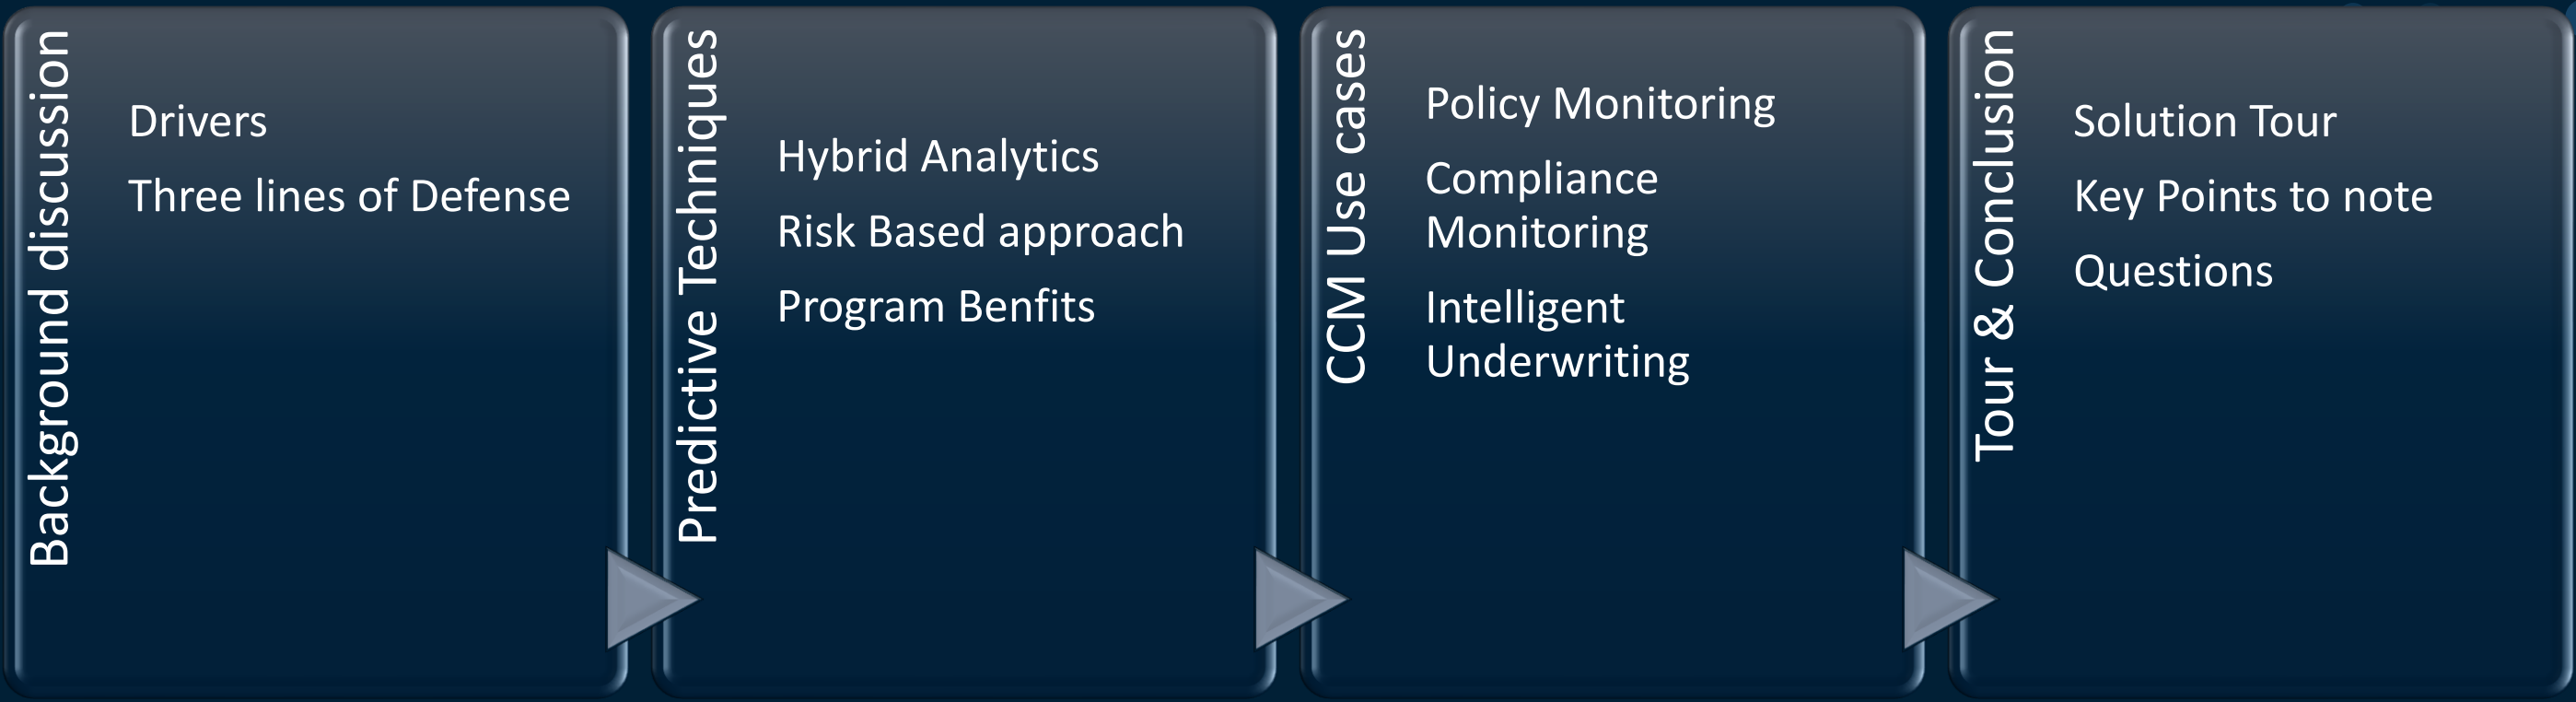

Module 2

26 November, 2021
02.00 PM to 05.00 PM (India Time)

Continuous Control Monitoring
Life Insurance

Session Map

Drivers of Continuous Control Monitoring Program

- Regulatory Landscape**
 - Sec 45 grants only three years window to surface misstatement leading to undue exposure
 - Liberalized KYC Norms (e-KYC and non-face-to-face onboarding norms)
- COVID - 19**
 - New normal workplace adoption due to Travel Restrictions lead to drop in coverage
 - Lead to increase in term policies volume
 - Too many covid death claims exploiting system vulnerabilities.
- Board Directive**
 - Enterprise-wide Unified risk and compliance posture (dashboard) across three lines of defense.
 - Minimize siloed technology investments and implementation efforts.

Why SAS Continuous Control Monitoring Solution?

- Risk Based Planning & Continuous Planning**
 - Data driven risk-based planning enriching risk assessments
 - Risk based Continuous planning alongside the execution
- Risk based Monitoring**
 - Multi level analysis
 - Hybrid Analytics
 - Risk based scoring
- Digitalisation**
 - Enable decision making power over and above the automation
 - AI ML driven analytics to deal with unstructured data driven assessment
- Self Sustain the Program**
 - Control functions seeking for self service deployment of compliance/audit rules and testing features
 - Integrated self service reporting/ dashboard.
- New Normal Adoption**
 - Fulfill the charter with remote working environment
 - Enable monitoring and strengthening the policy norms thematically

Drivers of Continuous Control Monitoring Program

1 Regulatory Landscape

- Sec 45 grants only three years window to surface misstatement leading to undue exposure
- Liberalized KYC Norms (e-KYC and non-face-to-face onboarding norms)

2 COVID - 19

- New normal workplace adoption due to Travel Restrictions lead to drop in coverage
- Lead to increase in term policies volume.
- Too many covid death claims exploiting system vulnerabilities.

3 Board Directive

- Enterprise-wide Unified risk and compliance posture (dashboard) across three lines of defense.
- Minimize Siloed technology investments and implementation efforts.

Three lines of Defense - Challenges

Timely resolution of Underwriting exceptions

Early claim model overlaps with fraud scoring

Remediate compliance gaps before regulator reviews

Timely Assessment of claims to improve customer service

Underwriting scores are cryptic and not white box

Three lines of Defense - Challenges

Claim Fraud Model scores are cryptic and not white box

Timely identification of compliance exception

Focus on claim stage is reactive

Remote / Offsite Review and Resolution

Three lines of Defense - Challenges

Timely Detection and Resolution of Exceptions

Remote / Offsite Review and Resolution

Dependency on business to provide data

Why SAS Continuous Control Monitoring Solution?

Risk Based Planning & Continuous Planning

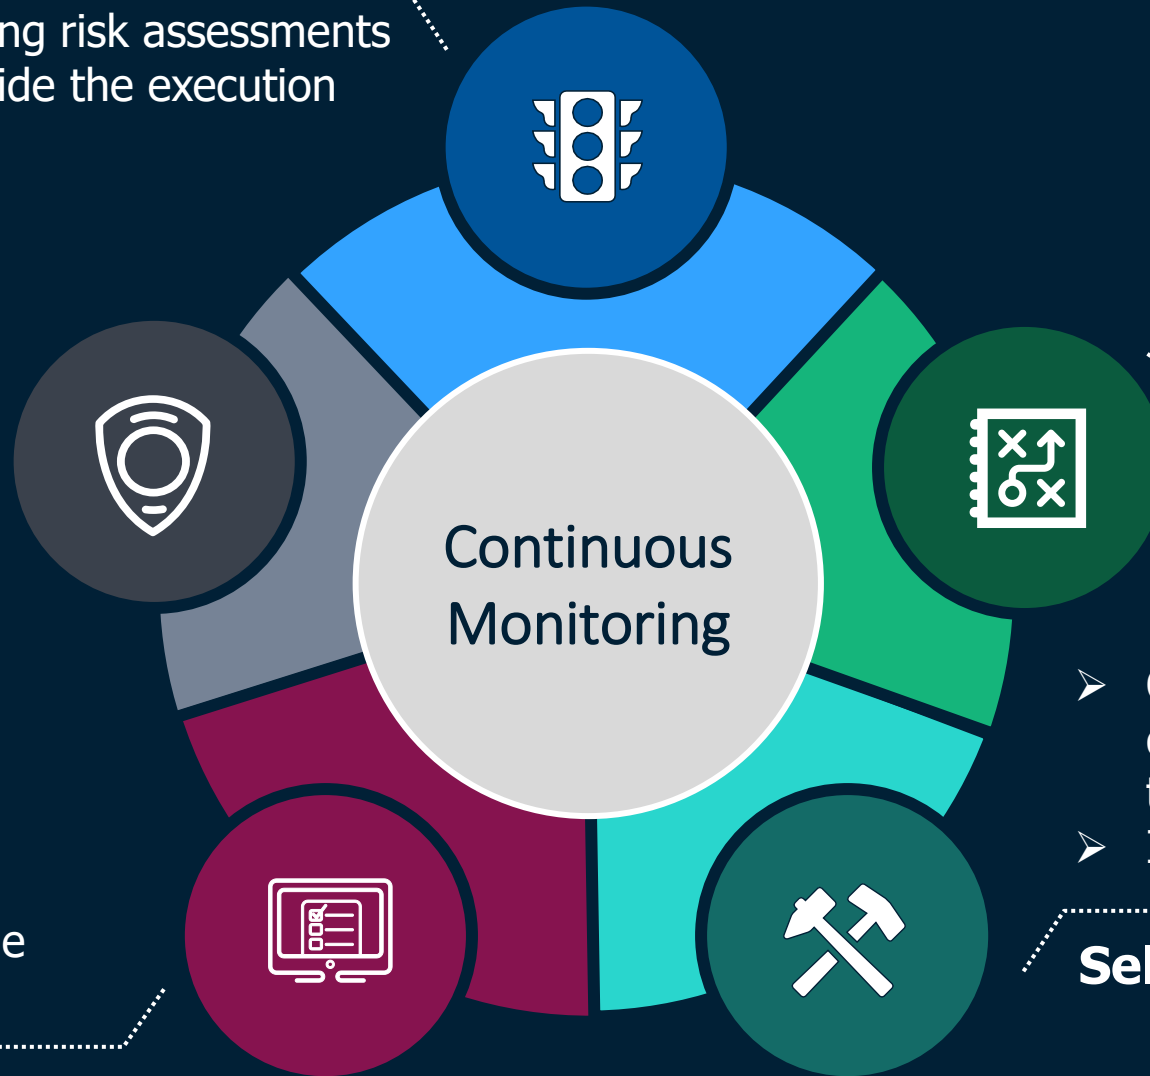

- Data driven risk-based planning enriching risk assessments
- Risk based Continuous planning alongside the execution

Risk based Monitoring

- Multi level analysis
- Hybrid Analytics
- Risk based scoring

- Fulfil the charter with remote working environment
- Enable monitoring and strengthening the policy norms thematically

New Normal Adoption

- Enable decision making power over and above the automation
- AI ML driven analytics to deal with unstructured data driven assessment

Digitalisation

- Control functions seeking for self service deployment of compliance/audit rules and testing features
- Integrated self service reporting/ dashboard.

Self Sustain the Program

Continuous Monitoring Initiative Benefits

Business

- ✓ **Conduct business** with better reputation and **Business Resilience**
- ✓ Eliminate redundancy & Efficient response to issues result in saved **business hours**.

Financial

- ✓ Minimize **Fraud Loss** by calling the policies under question on time.
- ✓ **Minimize** IRDA Guideline policy **breach penalties**
- ✓ Centralized investigation provides **cost efficiencies** eliminating travel and leverage common data.,

Compliance

- ✓ Proactively **prevent issues** rather than regulator / audit discovering later.
- ✓ Strengthen Compliance with **Upstream compliance analytics**.

Operational

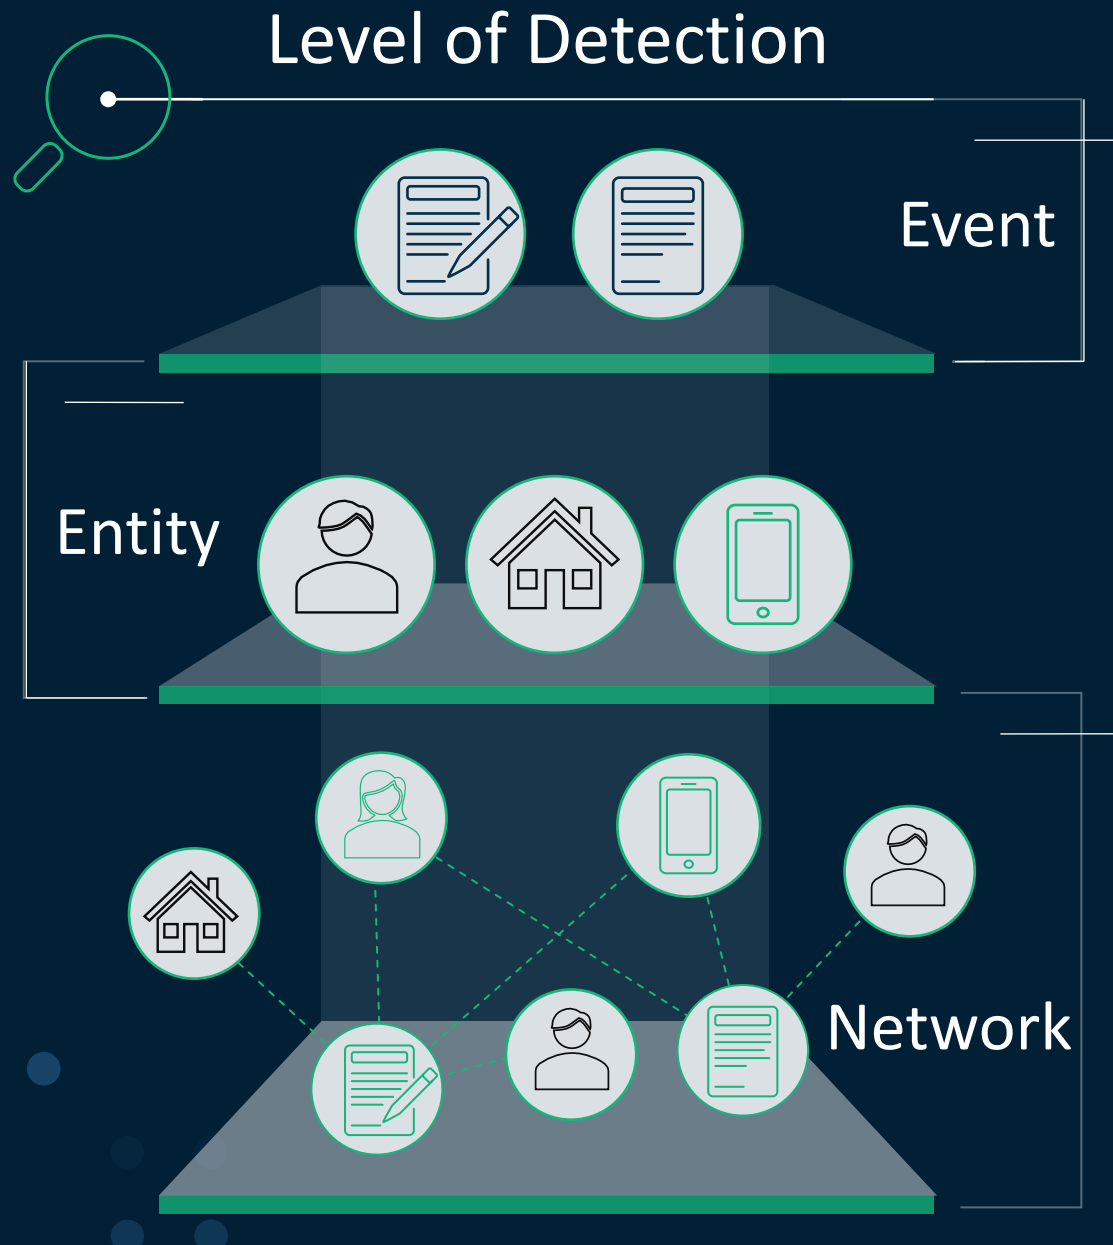

- ✓ Leverage **synergies between Compliance, Audit and Fraud**
- ✓ **Time efficient** Audit or Compliance reviews and **Focused limited scope reviews**

Technical

- ✓ Data driven approach with centralized data access.
- ✓ Ease of use and build inhouse skills to **enable self service Analytics** and Reporting

Multi level Continuous Control Monitoring

- ❖ Policy, Claim, Payment (maturity/claim)
- ❖ Policy servicing request, Complaint

- ❖ Client (Policy Holder, Life Assured , Nominee)
- ❖ Agent, Branch, Region, Zone
- ❖ Account Number, PAN, Address, Phone etc.,

- ❖ Group of Customer, Agent, Claims

Hybrid Analytics for Continuous Control Monitoring

Anomaly Detection

Identify claimants who use common account numbers though unrelated

Machine Learning

Predictive modelling based on previous fraud outcomes. Reduce false positives and prioritise alerts. Discover new emerging threats. Extend the fraud use case e.g. image analysis.

Database Searches

Looking for matches to watchlists entities or previous intelligence

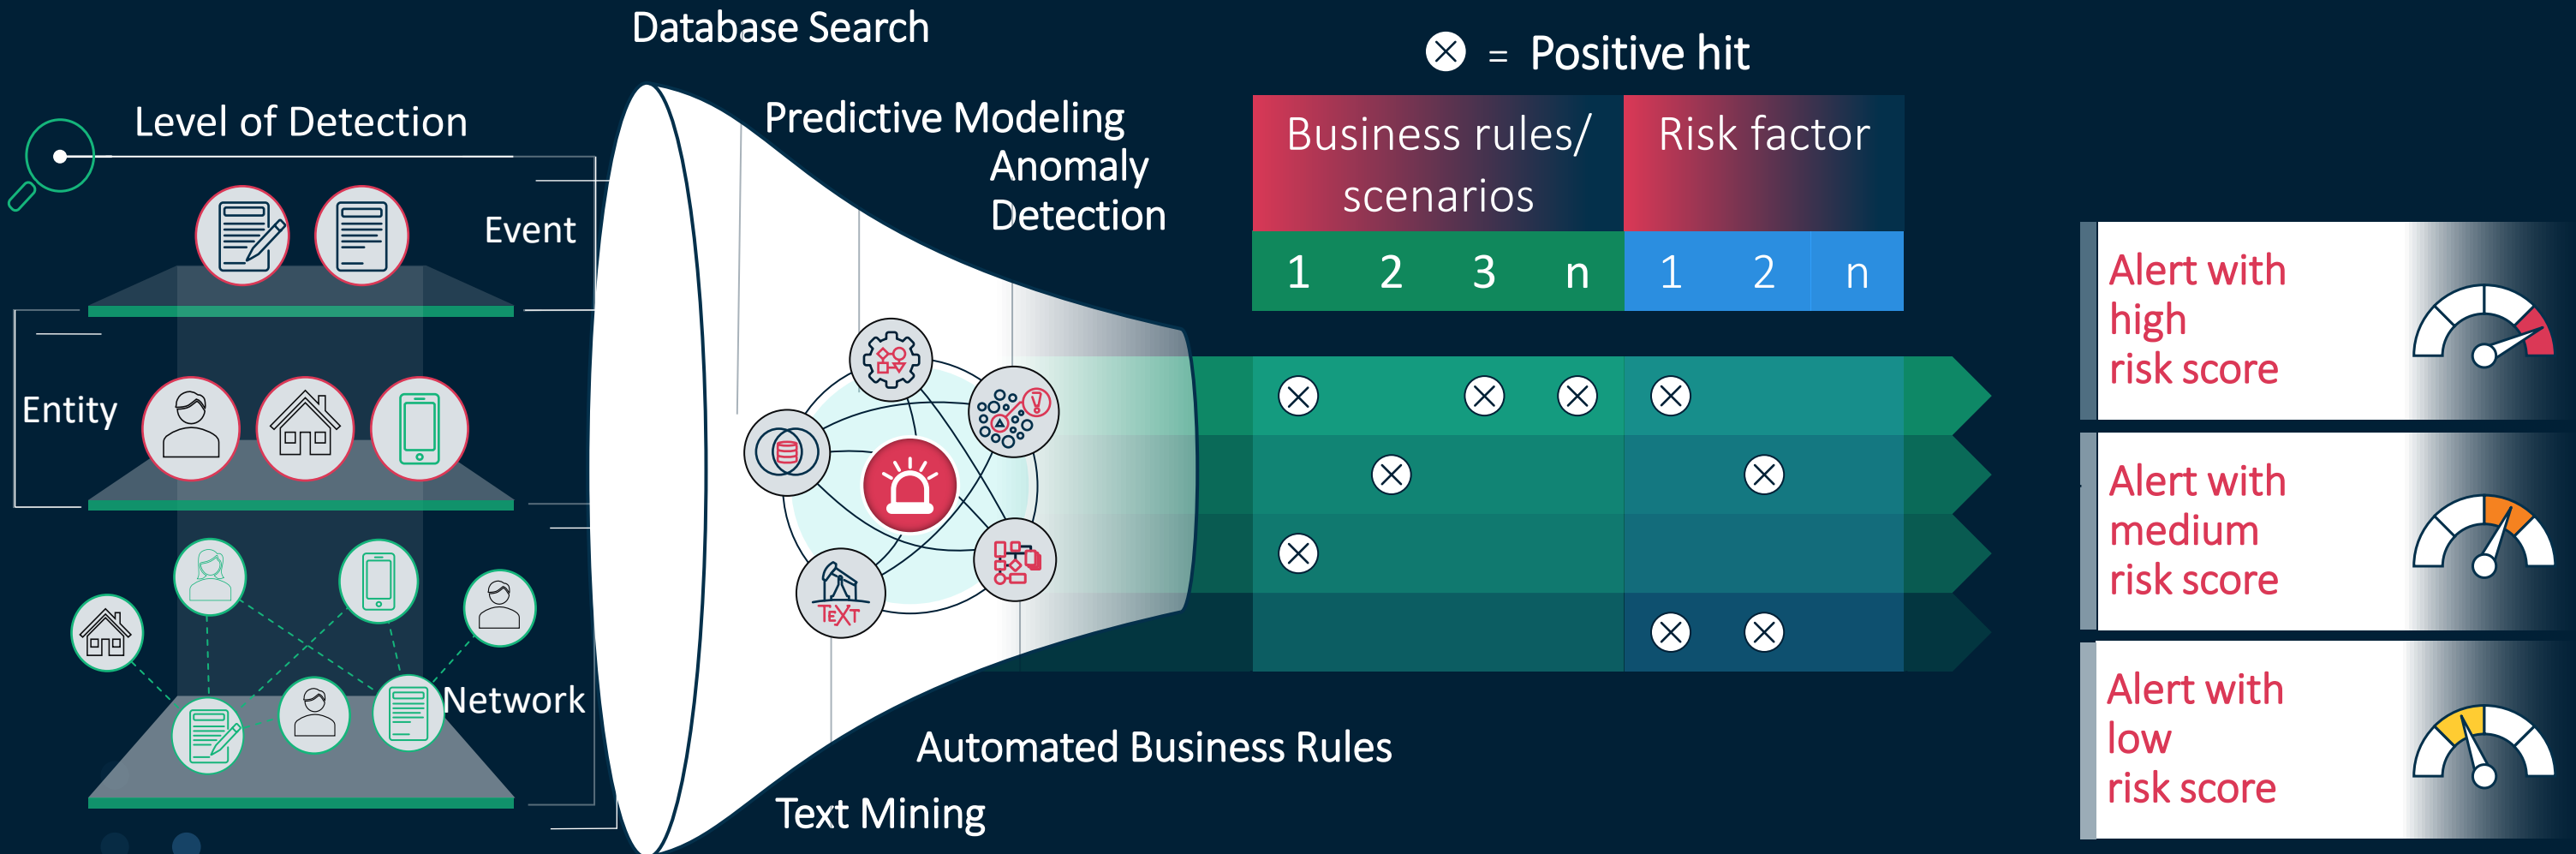

Automated Business Rules

Claim(s) close to proximity duration of 3 years plus (Sec 45)

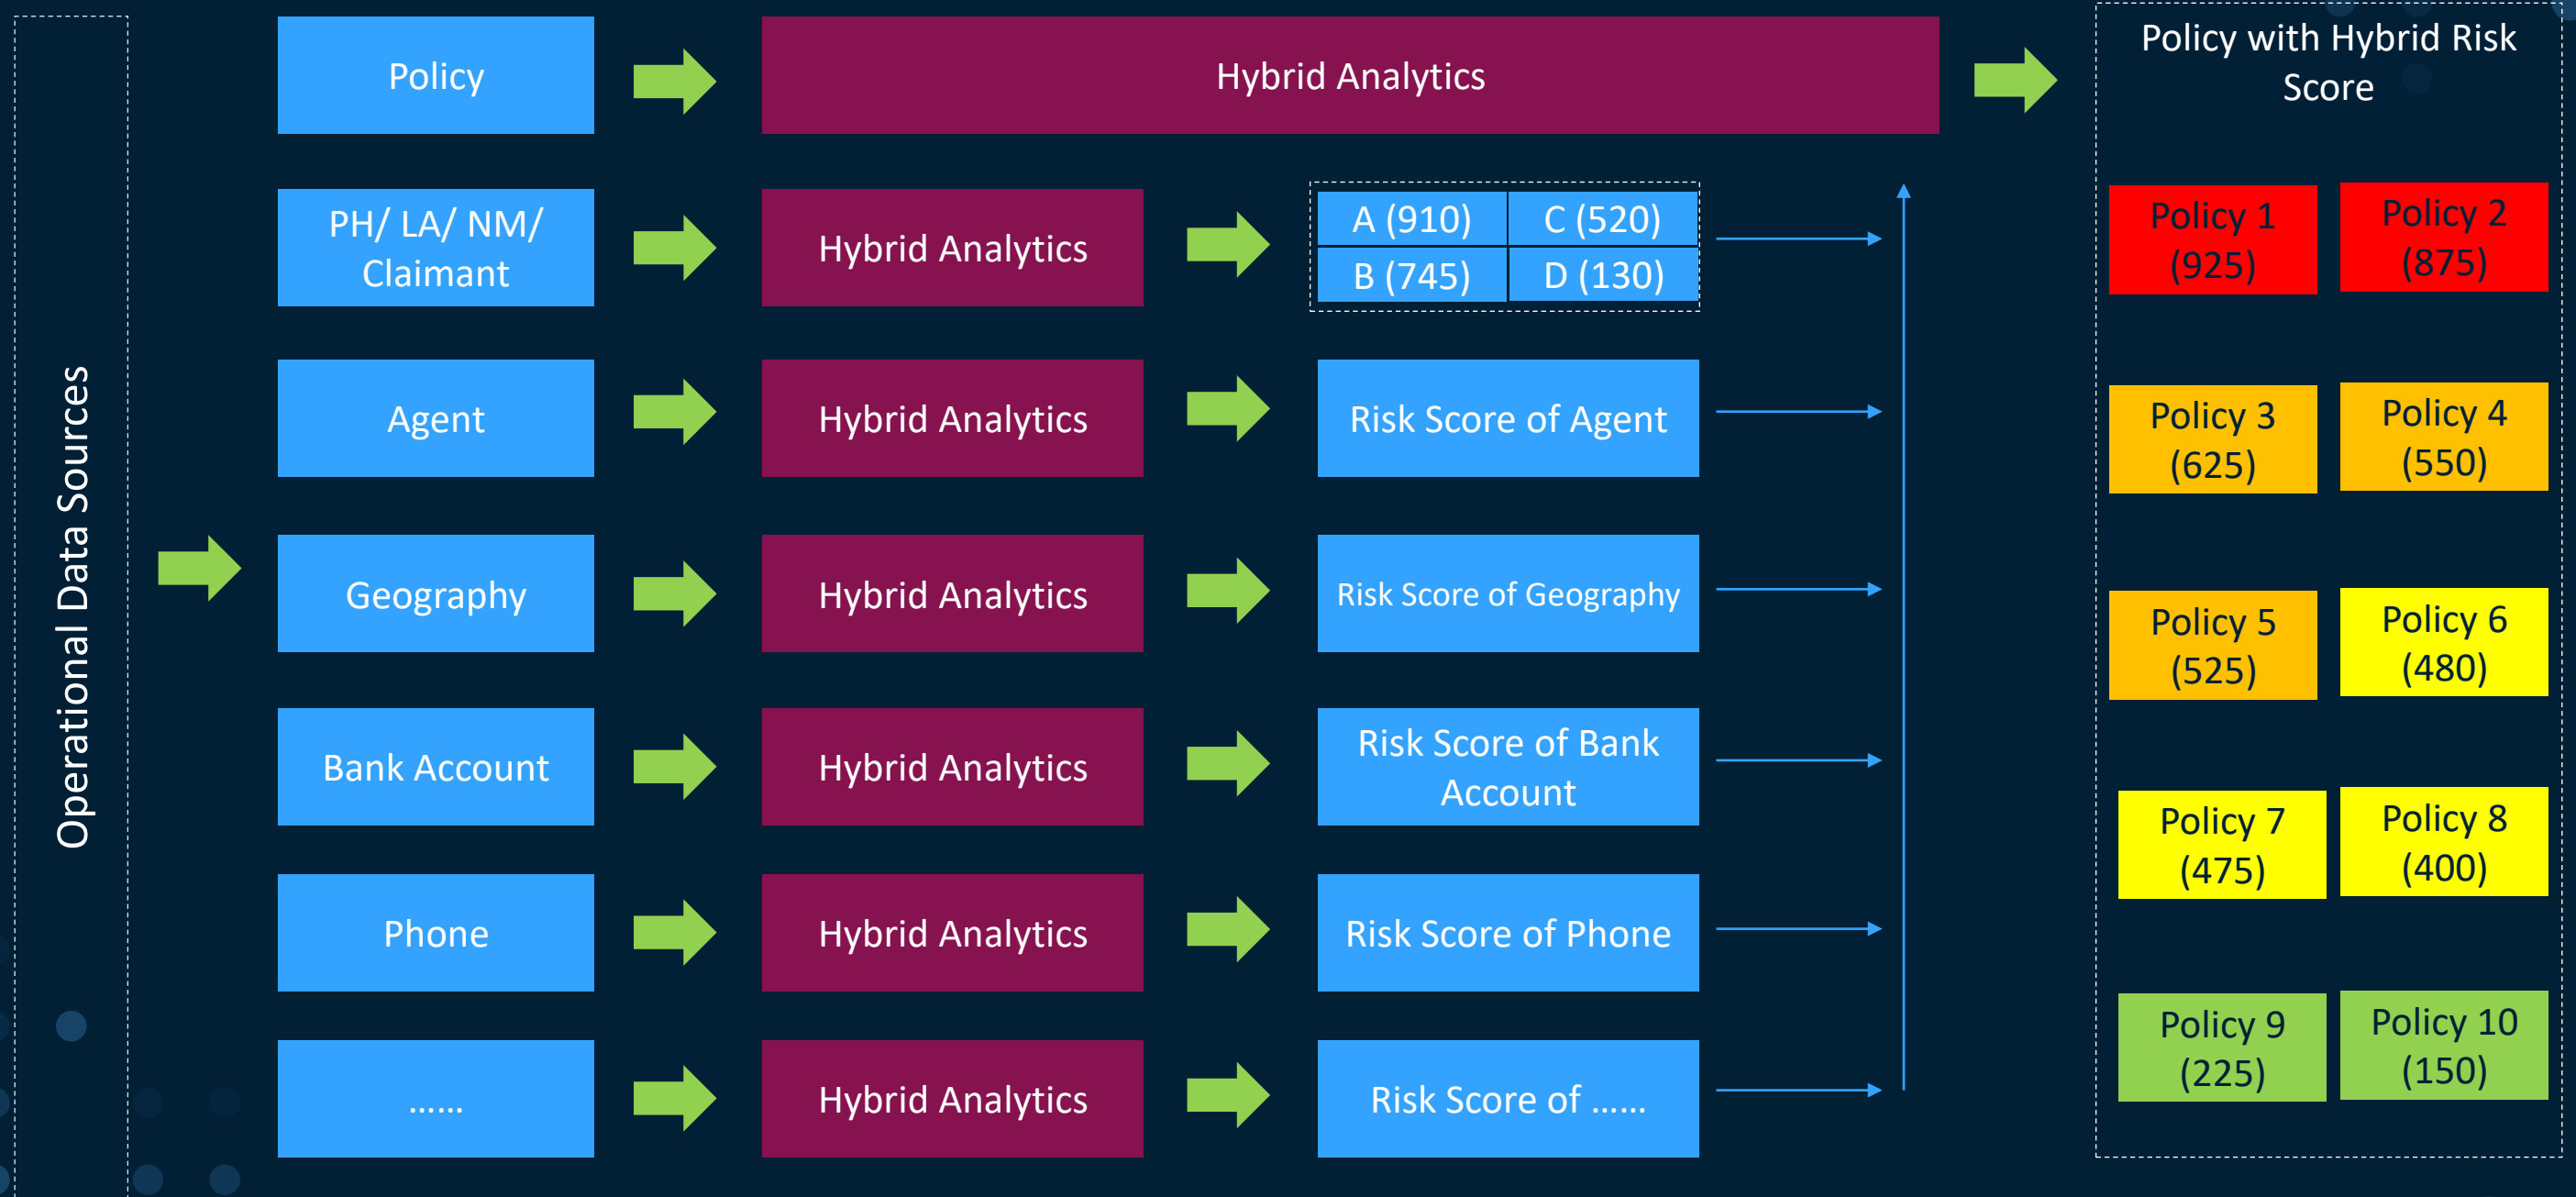

Text and Image Mining

Similar suspicious death reasons descriptions occurring across multiple claims

Risk Based Approach in Policy Monitoring

Detection with SAS Hybrid approach

Assessment Digitalization in CCM

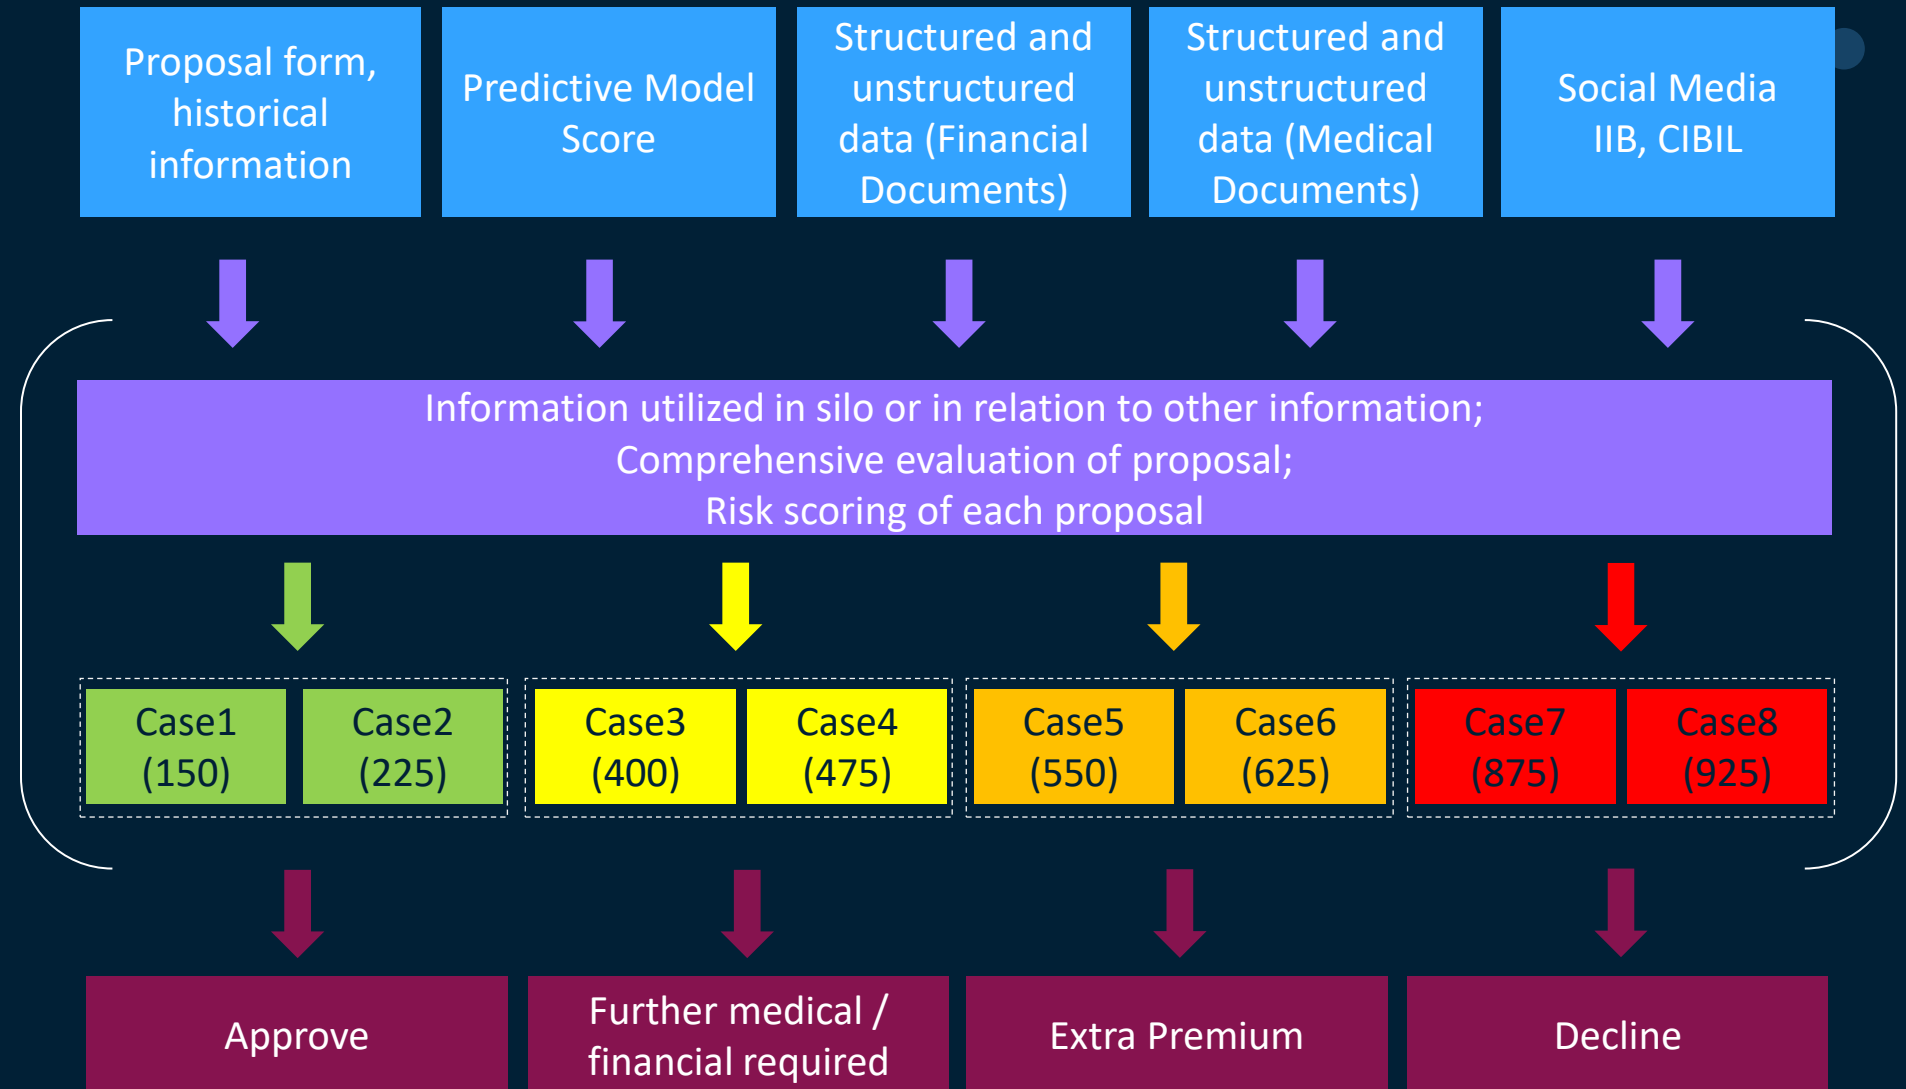

Control Data	Fully Digitalized and Integrated	Disintegrated System	Unstructured Text Data	Complex model-based approaches
HYBRID Analytical Techniques	- Rule Based Analytics	- Integrated Compliance Data Mart - Continuous Audit of 100% events	- Contextual Analytics - Natural Language Processing	- Image Analytics
Typical Audit Control	Continuous Product Compliance Review of the issued policies	Review the polices against the product parameters integrating multiple source data – Application, Policy, Nominee, Insured etc.,	Validate and Review the Delegation of Power or Email approvals	Validate the KYC and reports in image/video form.

Life Insurance – Intelligent Underwriting

- Surveillance engine
- Alert and event management
- Transaction and Entity analysis
- Targeted investigations
- Search and discovery
- Case management

Known Pattern

Unknown Pattern

- Examine current data to identify outliers and abnormal transactions that are somewhat different from ordinary transactions
- Include univariate and multivariate outlier detection techniques, such as peer group comparison, clustering, trend analysis, and so on.

Senior Management

Policy Monitoring

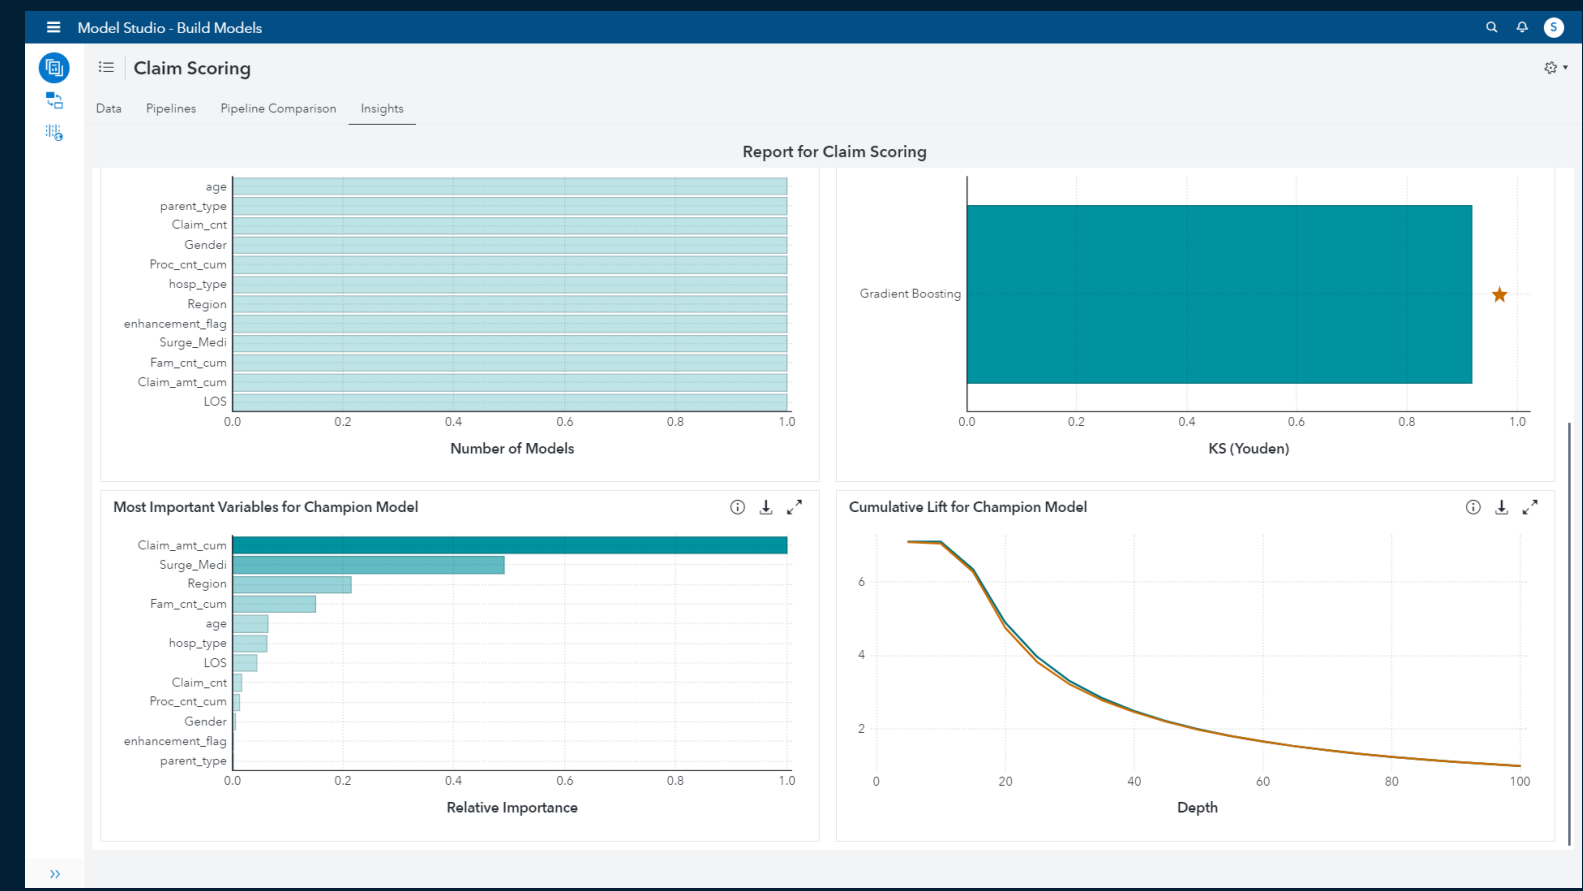

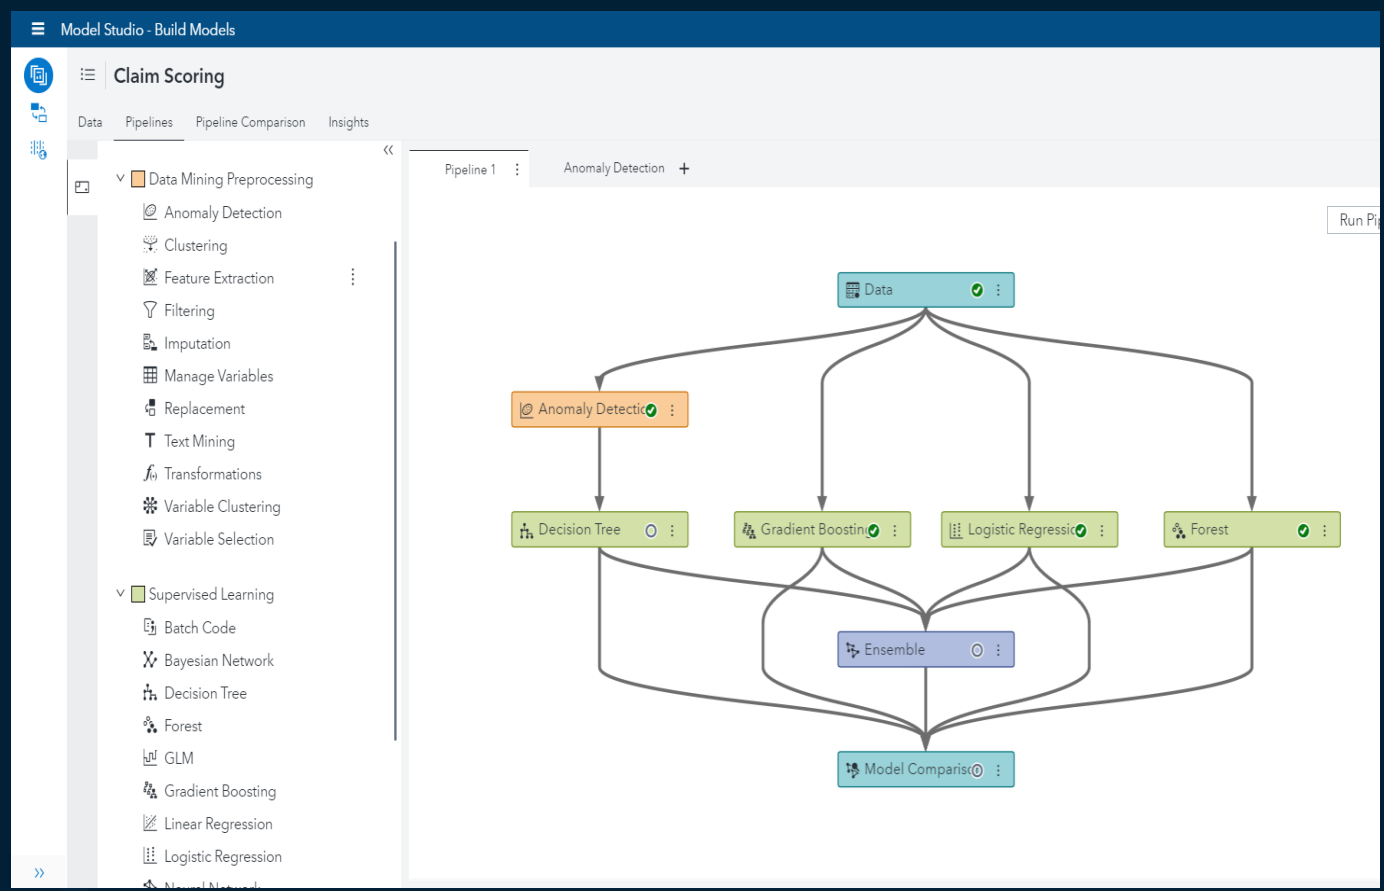

Compliance Monitoring

Alert/ Case Manager

Rule Author

Predictive Analytics

Predictive Modelling

- Use historical behavioural information of known event to identify suspicious behaviours similar to previous fraud patterns
- Include multiple modelling techniques, such as regression analysis, generalized linear models, decision tree, neural networks etc.
- Outcome of the Model support Risk Scoring of Claims, Policies, Agents, Hospitals to adjust the alert triggers based on risk ranking or score alerts based on risk ranking.

Proactively **monitor and call policies in question** due to fraud/ misstatement before 3 years

Proactive identification of compliance exceptions rather IRDA identifying later.

Sustain with **self service Analytics with Hybrid Analytics** to minimize false positives

Cost and Time efficient
Remote reviews
leveraging data centrally
