Mortality Improvement

Murshid Kuttihassan

VP and Actuary, MetLife Noida

March 2019

Supercentenarian (age>110)

Approximately 1 in 1000 Centenarians become Supercentenarians

Emma Morano

29 November 1899 – 15 April 2017

- Before her death at 117, Emma was the last living person born in the 1800s. She remains the oldest Italian ever.
- Emma credited her longevity success in part to eating raw eggs, cookies, staying single, and positive thinking.

Mortality Improvement Overview

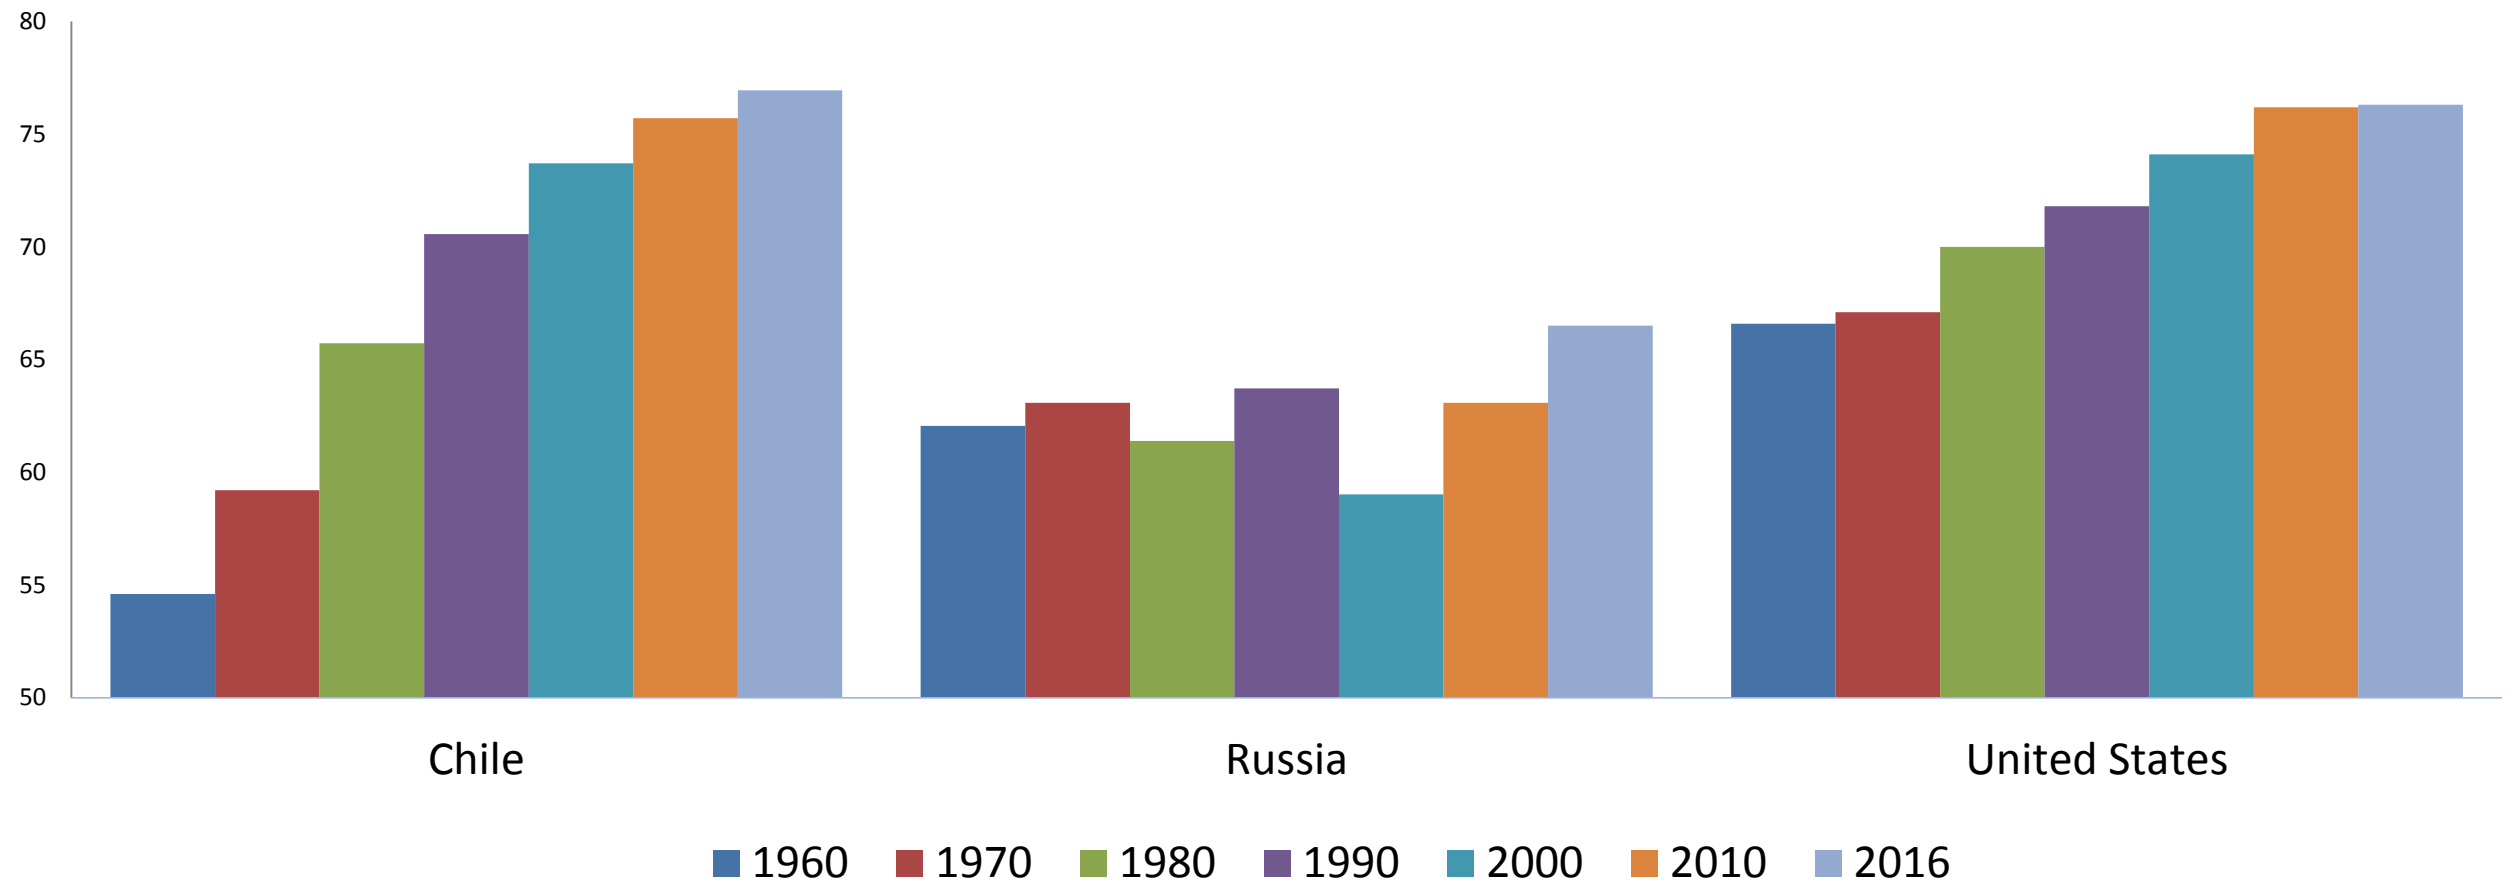

- 1 Life, Annuity, & Health Blocks
- 2 Understanding the Past & Present
- 3 Framing the Future – Current Trends
- 4 Modeling Approaches

Changing Life Expectancy

Three Different Country Experiences

Life Expectancy (Males, 1960 -2016)

Life Insurance Mortality Considerations

- 1 Underwriting for Mortality Risk is Changing in Life Insurance
- 2 Quicker, Paperless, & Less Invasive Underwriting
Alternative Sources for Health Information
- 3 Net Amount at Risk Is Significant (e.g. Pandemic PV impact)

Annuity & Pension Mortality Considerations

- 1 High-Level Risk Assessment on Group & Pension Business
No Underwriting for Retail Annuities
- 2 Pension Transfer Market - Large Blocks of Liability Being Transferred In Single Transactions
- 3 Longevity Risk is a “Slow Bleed” Risk that Can Emerge Over Time
Perpetuity Value is an Upper Bound on PV (interest-rate sensitive)
- 4 Longevity Risk & Mortality Risk Can Be Somewhat Offsetting

Health & Disability Morbidity Considerations

- 1 Morbidity and Mortality are Related but Difficult To Correlate
- 2 Costs are Driven by the Length and Severity of Sickness
- 3 Some Liabilities Can Be Hard to Invest For and Predict (LTC)

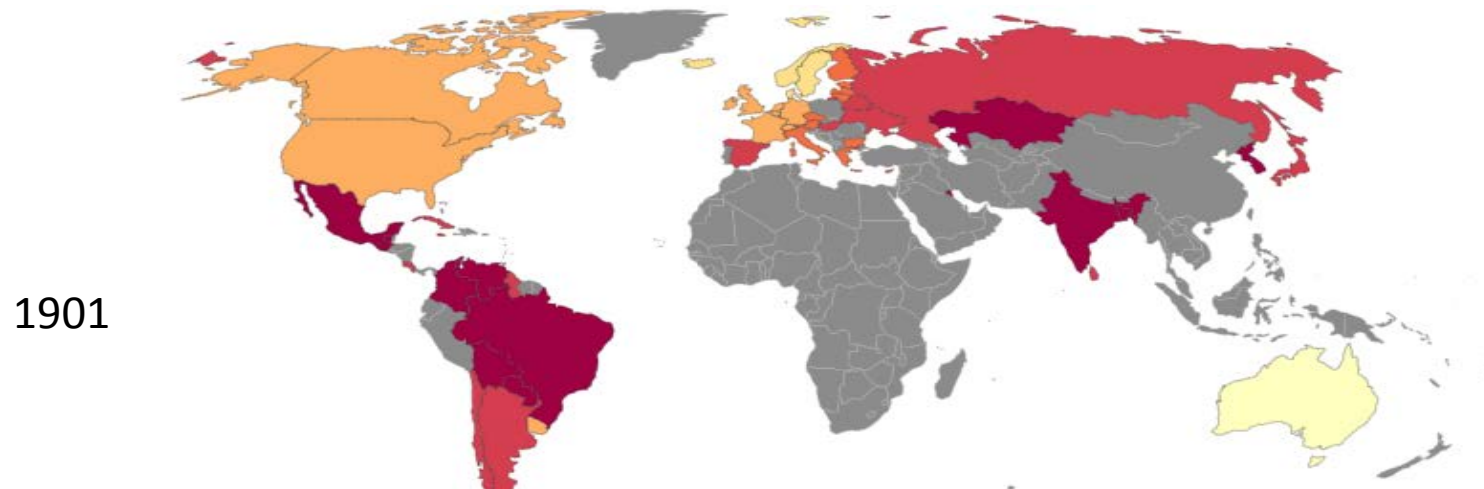

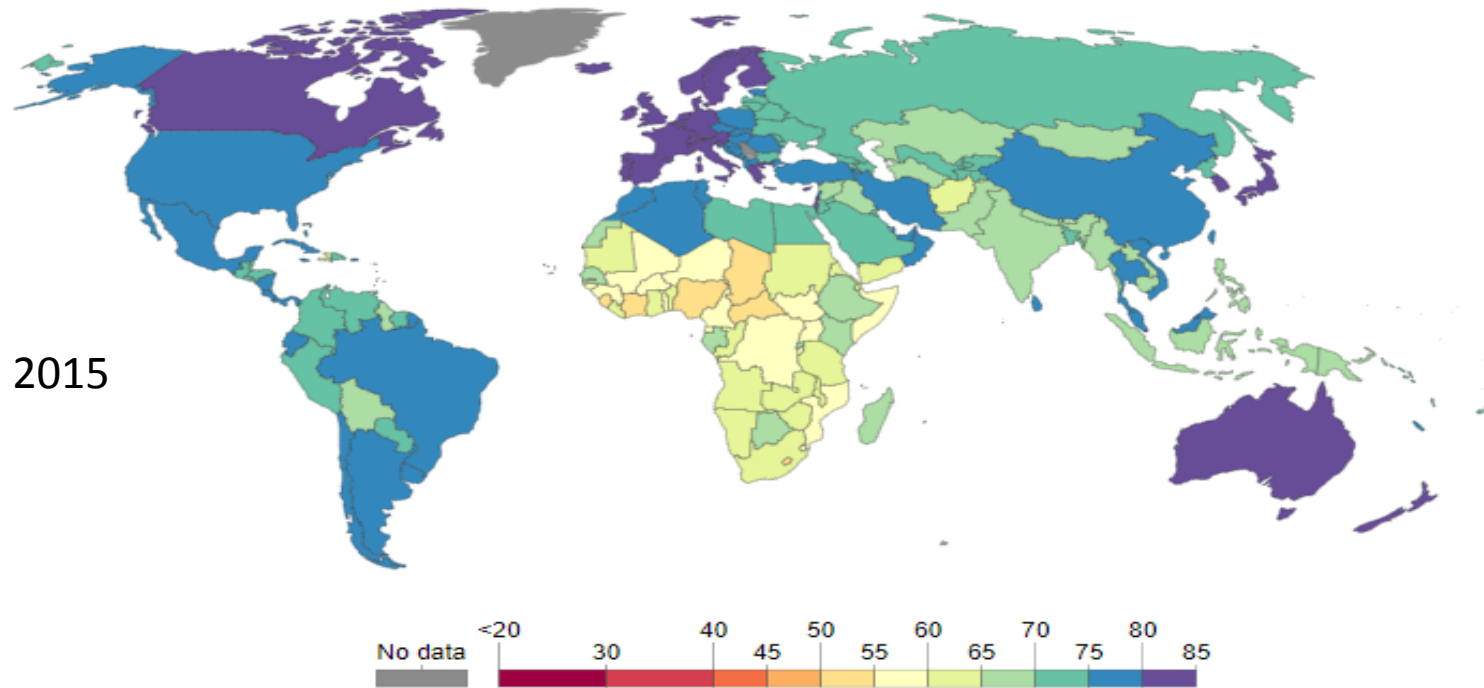

Historical Mortality Improvement

Life expectancy, 2015

Shown is period life expectancy at birth. This corresponds to an estimate of the average number of years a newborn infant would live if prevailing patterns of mortality at the time of its birth were to stay the same throughout its life

Our World
in Data

Clean Water
Sanitation
Vaccinations
Child Mortality Improvement
Smoking Cessation
Improved Work Environments
Statins & Other Drugs
Rise in Wealth

20th Century

HISTORICAL DRIVERS

U.S. Historical Mortality Improvement

“Cohort Effects” Seen Along a 45° Diagonal

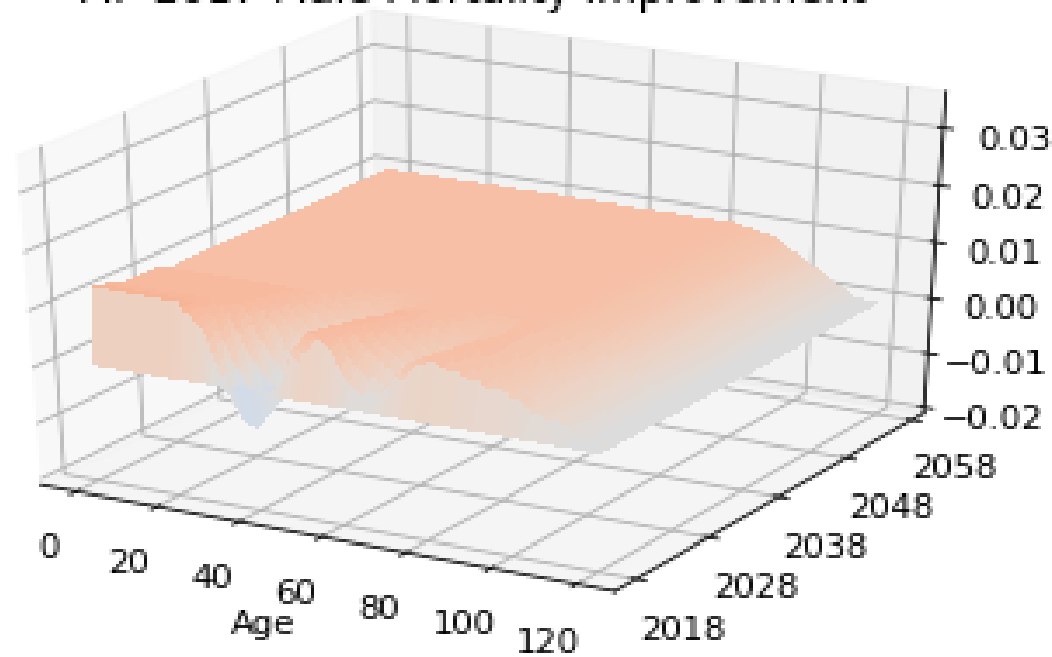

The vertical dashed white line on the heat map is the boundary between the historical and projected rates, and the thin vertical gray lines indicate the 2018 rates.

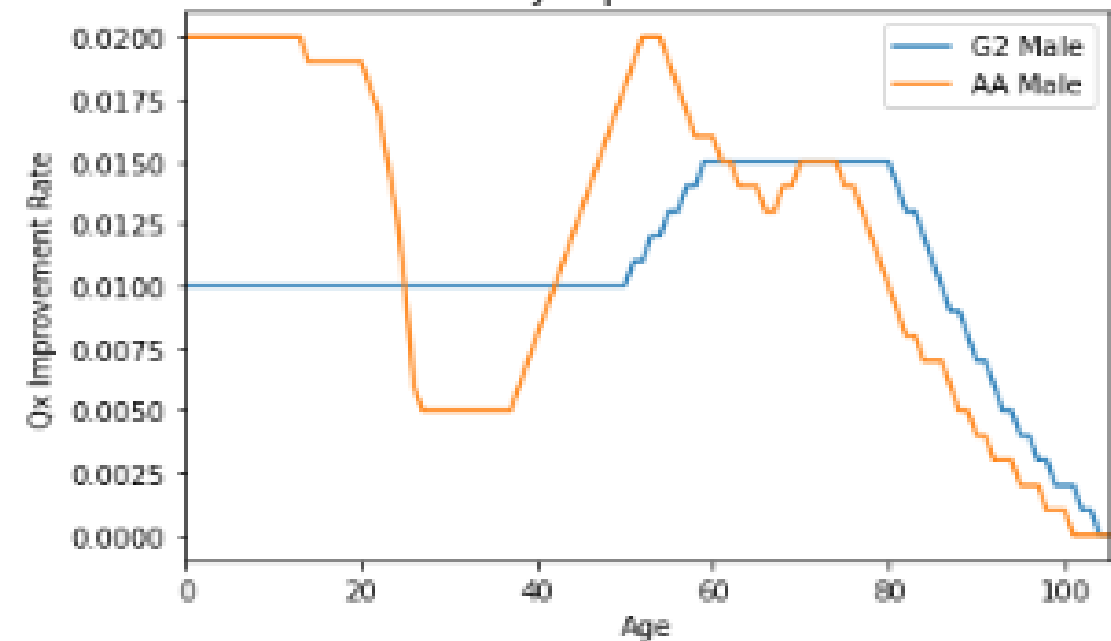

Mortality Improvement Scales at a Glance

The MP Pension Mortality Improvement Rate Varies by Calendar Year

MP-2017 Male Mortality Improvement

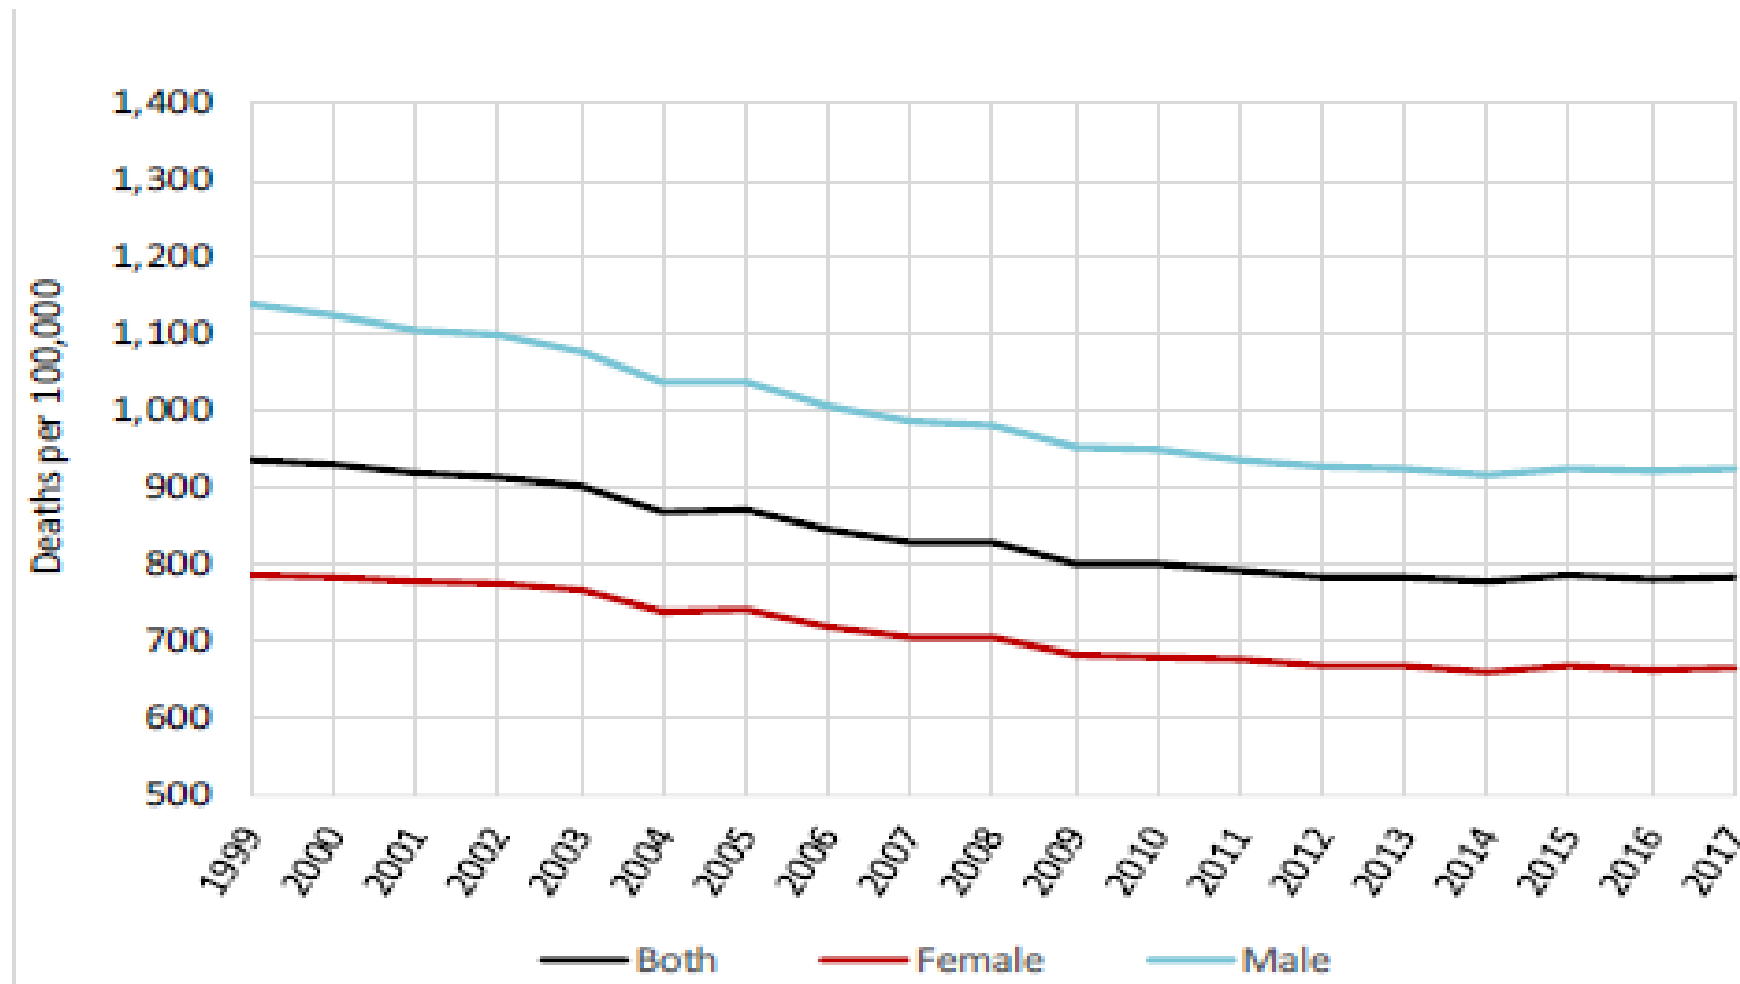

Mortality Improvement Rates

U.S. Mortality Improvement Slowing

Recent Years Have Even Shown a Mortality Increase

AGE-ADJUSTED MORTALITY 1999-2017

Life Expectancy Updates

U.S. Statutory Reserves Have Conservatism Built In (~85th Percentile)

2018 Cohort Life Expectancies (Complete)							
		Females			Males		
Projection Scale →	MP-2017	MP-2018	% Change	MP-2017	MP-2018	% Change	
Age							
25	64.39	64.23	-0.26%	61.78	61.49	-0.47%	
35	53.63	53.48	-0.28%	51.10	50.86	-0.46%	
45	42.95	42.83	-0.29%	40.48	40.30	-0.44%	
55	32.47	32.35	-0.36%	30.12	29.97	-0.50%	
65	22.68	22.61	-0.33%	20.71	20.60	-0.51%	
75	14.34	14.29	-0.34%	12.89	12.84	-0.40%	
85	7.68	7.66	-0.25%	6.75	6.73	-0.34%	

Based on these assumptions, age-65 cohort life expectancy decreased slightly less than one month for females and slightly more than one month for males.

Eliminating Certain Causes of Death

Life Expectancy Related to Fighting Disease (U.S.)

At Birth...

31% chance of dying from **heart disease** (or 41% from a “major cardiovascular” disease)

22% chance of dying from **cancer**

<u>Age</u>	<u>Curing Heart Disease</u>	<u>Curing Cancer</u>
55-60	25.6 => 30.9 (+5.3)	25.6 => 28.4 (+2.8)
60-65	21.6 => 26.7 (+5.1)	21.6 => 24.1 (+2.5)
65-70	17.8 => 22.8 (+5.0)	17.8 => 19.9 (+2.1)
70-75	14.3 => 19.1 (+4.8)	14.3 => 16.0 (+1.7)
75-80	11.1 => 15.7 (+4.6)	11.1 => 12.4 (+1.3)
80-85	8.4 => 12.7 (+4.3)	8.4 => 9.3 (+0.9)

Future Mortality Improvement

Framing the Future

The Art of Modeling

Extrapolation, Simulation, and Alternative Approaches

- 1** How Complex Should Your Model Be?
(Group vs. Individual Level, Multi-Decrement Cause of Death, Improvement Timelines)

- 2** Experience Takes Years to Emerge
(Human Lives are Long Compared to Animal Studies)

- 3** Alternative Views of the Future
(Improvement Plateau vs. Medical Breakthroughs)

- 4** Simulations & Scenario Testing Can Offer Insight
