

Analytics in Health Insurance
4th Seminar on Data Science and analytics,
Indian Actuarial Institute(IAI)
11-2-2019

Prashant Rai, SAS consultant-Insurance

AGENDA

1

Analytics - health insurance

2

Challenges and Opportunity

3

Strategy-People-Process

4

Insurance Analytics-Why Now!!!

5

Analytics-Area of application

6

How a complete analytics framework looks like-
Elaboration through fraud management

Healthcare
Data is the new
oil and
Exponentials
are the
Refineries

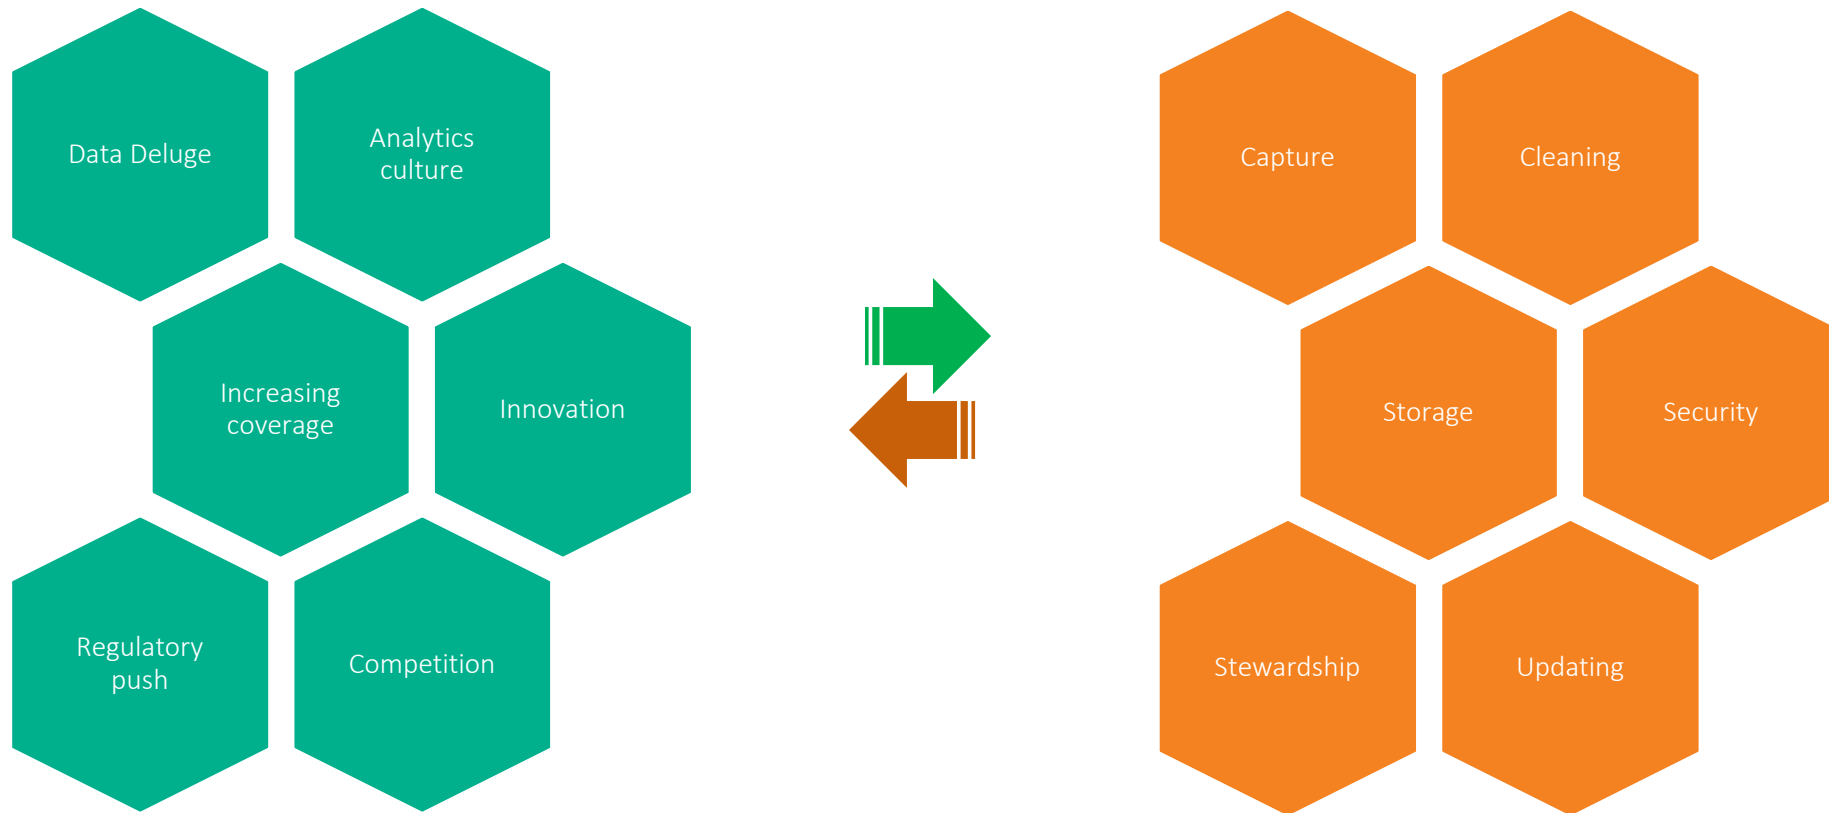

Why Health Insurance needs data analytics?

1. The cost of healthcare in India is increasing at 20% every year
2. There is a shortage of 1.5 million doctors and 2 million Hospital beds
3. With health insurance, only around 5% of the middle class have health coverage, and catastrophic coverage is even lower.
4. Ayushman Bharat has covered around 50 Cr. Indians but it is still inadequate and half of the population is still uncovered
5. Fraud Abuse and wastage is rampant and it is growing menacingly with respect to growing coverage
6. Innovation in digitalization and analytics is still underinvested and long term strategy for its consumption is pending since a long time

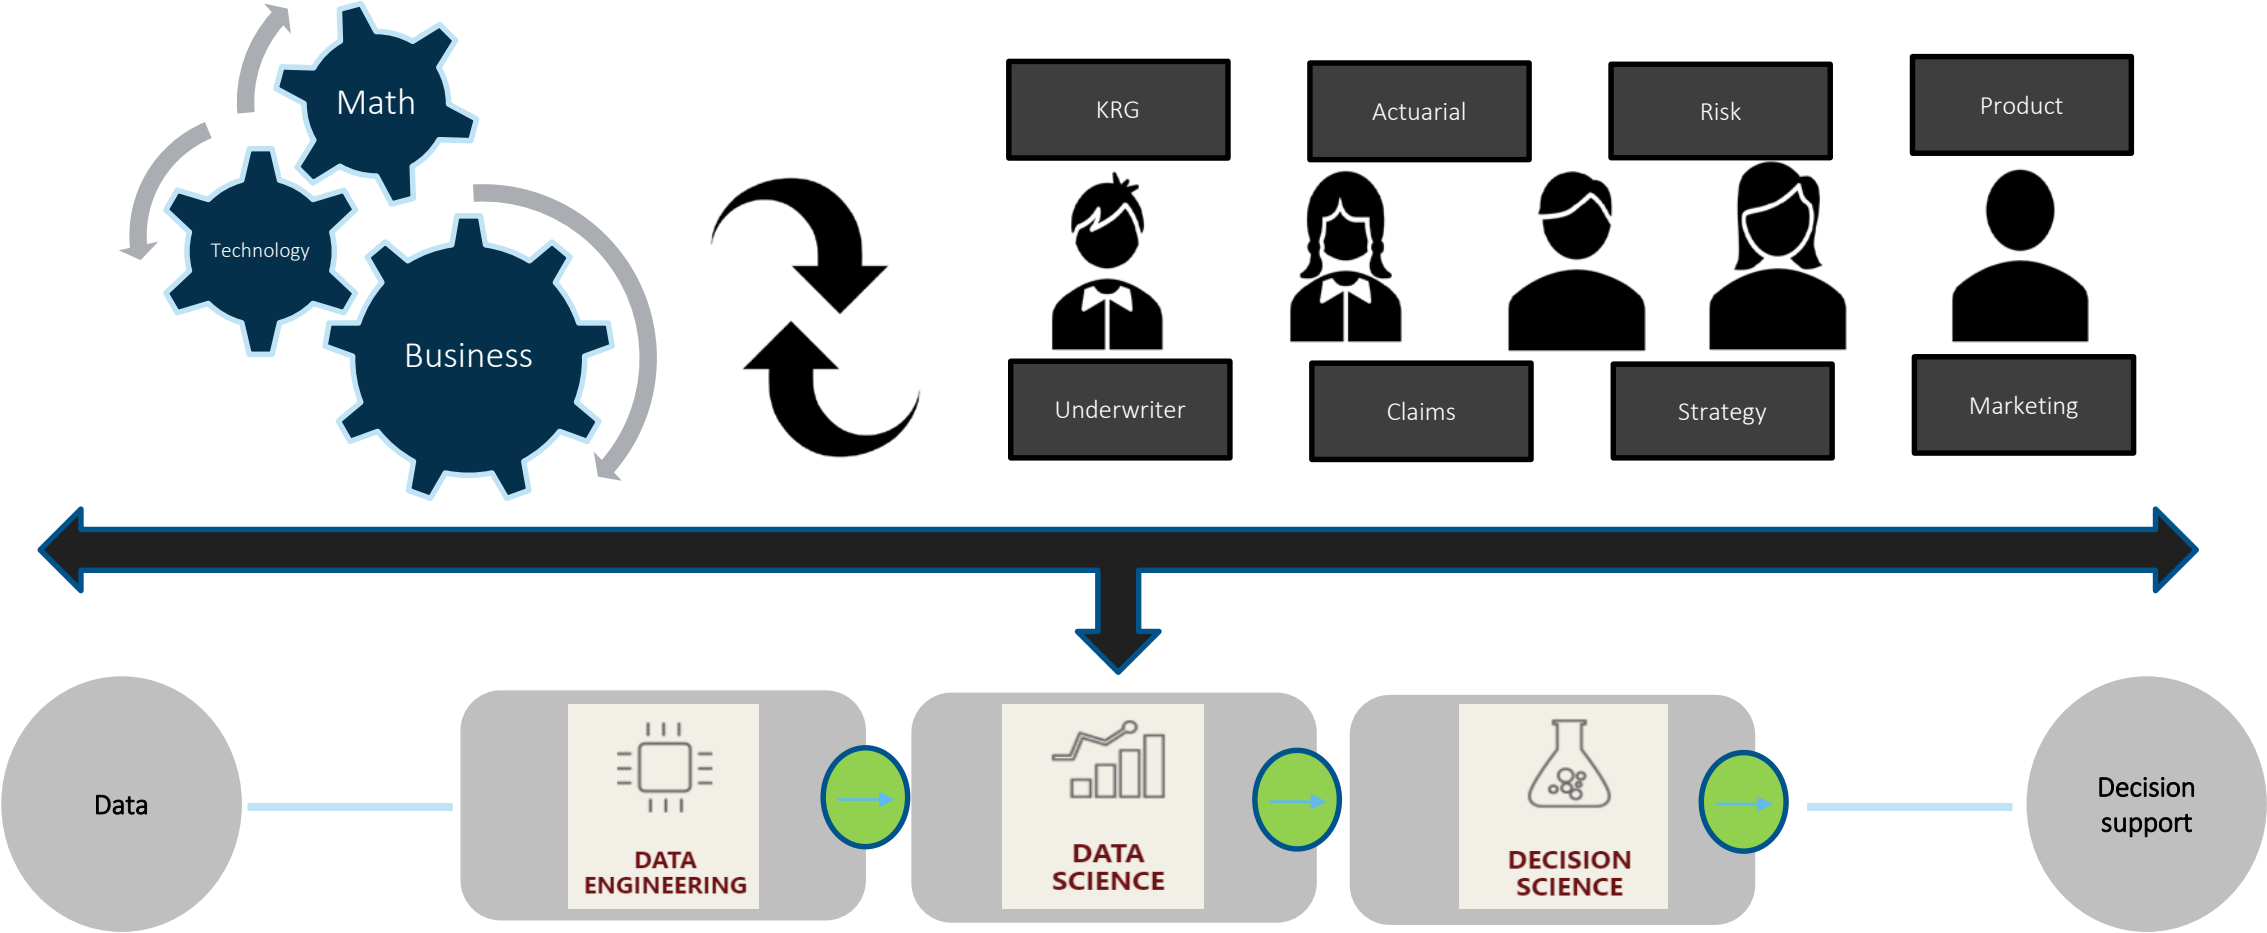

Opportunity and challenge in health insurance analytics

Analytics in healthcare comes with many challenges, including security, visualization, and a number of data integrity concerns.

Framework- Successful analytics initiative

- Analytics is all about right strategy, analytics culture in decision making sitting at right process.
- Secondly, analytics adds to your great business sense which is already therewith great people working with the company.

Exciting time for data analytics in Health Insurance

- Traditionally, for most organizations data analytics meant purchasing a Business Intelligence tool and creating reports. The impact of such tools was minimal as most healthcare data is both non-standard and unstructured (text, images) and data from multiple sources had to be combined to create value
- Natural Language Processing, image recognition and speech analysis combined with the availability of large-scale computing power, the ability to convert this type of information into analyzable signals is now within reach

Sources of the data deluge

Mobile

EMRs

Paper / Text Documents

Social Media

Images

Videos

Sensors / Devices

40-50%

Annual growth in digital data volume

62%

Annual growth in unstructured data

+

~9X

of unstructured data vs. structured data by 2020

Advances in computing power and techniques

Smarter Algorithms

Faster Processing Speed

Improved Visualization

Retail Consumerism

Value Based Care

Personalized Digital Health

Preventative Medicine

Drug Trials and Discovery

Advances analytical and computing techniques coupled with the explosion of data in healthcare organizations can help uncover leading clinical practices, shrink research discovery time, streamline administration, and offer new personalized engagement paradigms at an industrial scale that align people's decisions and actions in ways that improve outcomes and add value

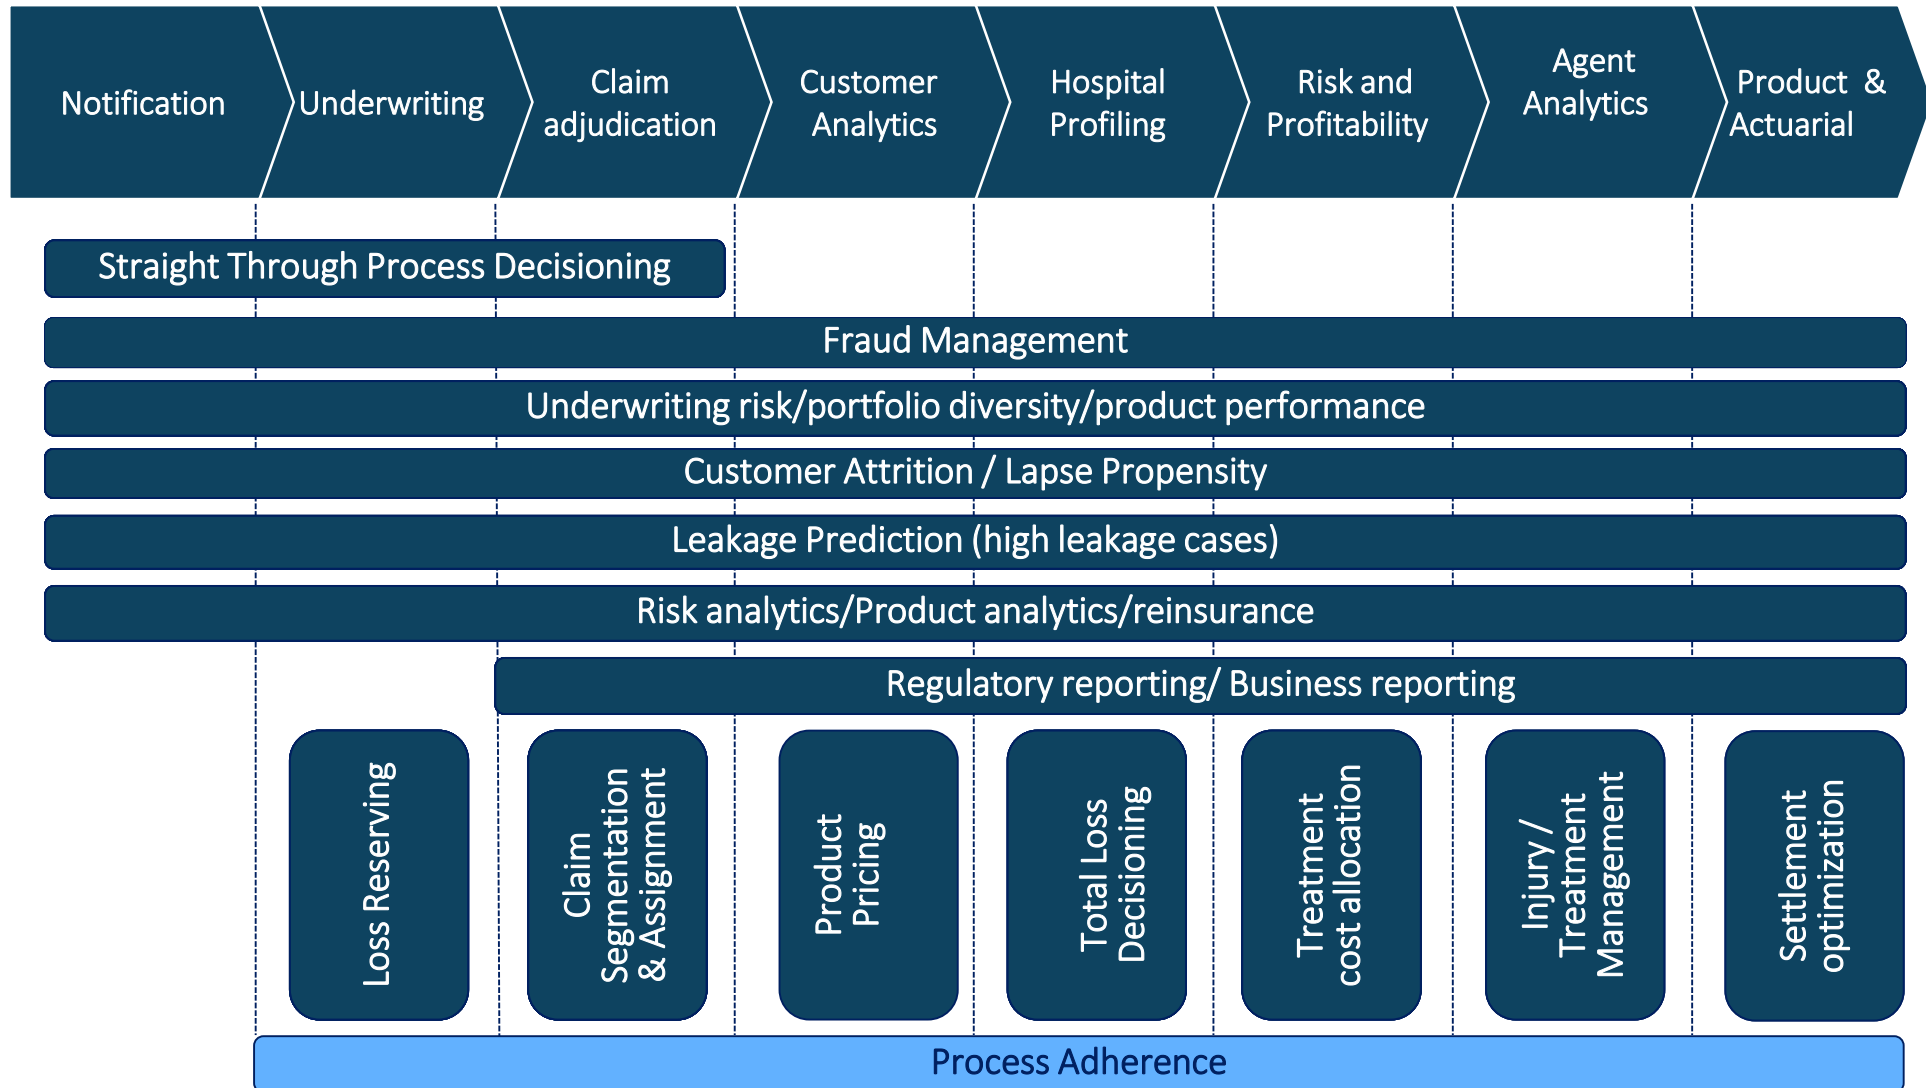

Customer Centric

Optimal Cost Structure

Adaptive Organization

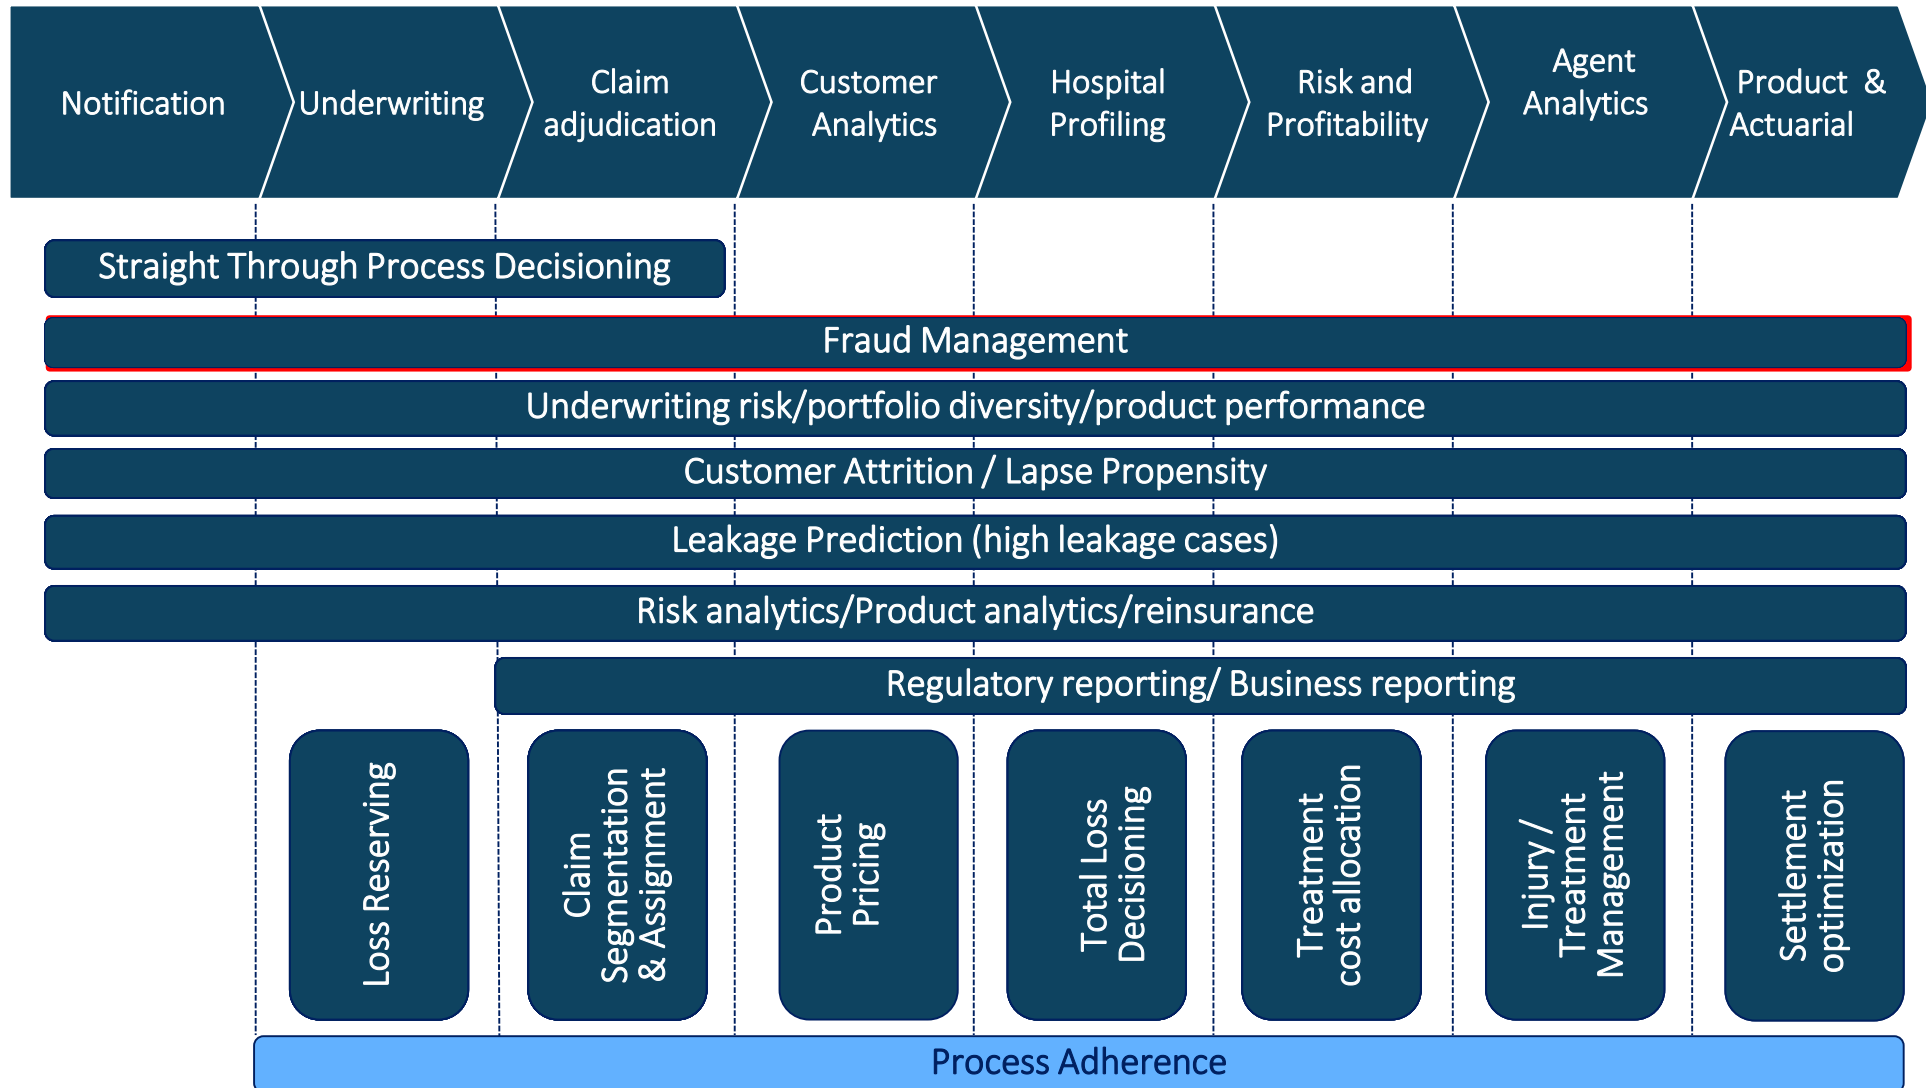

Analytics in the whole life cycle of health insurance

Analytics Implementation

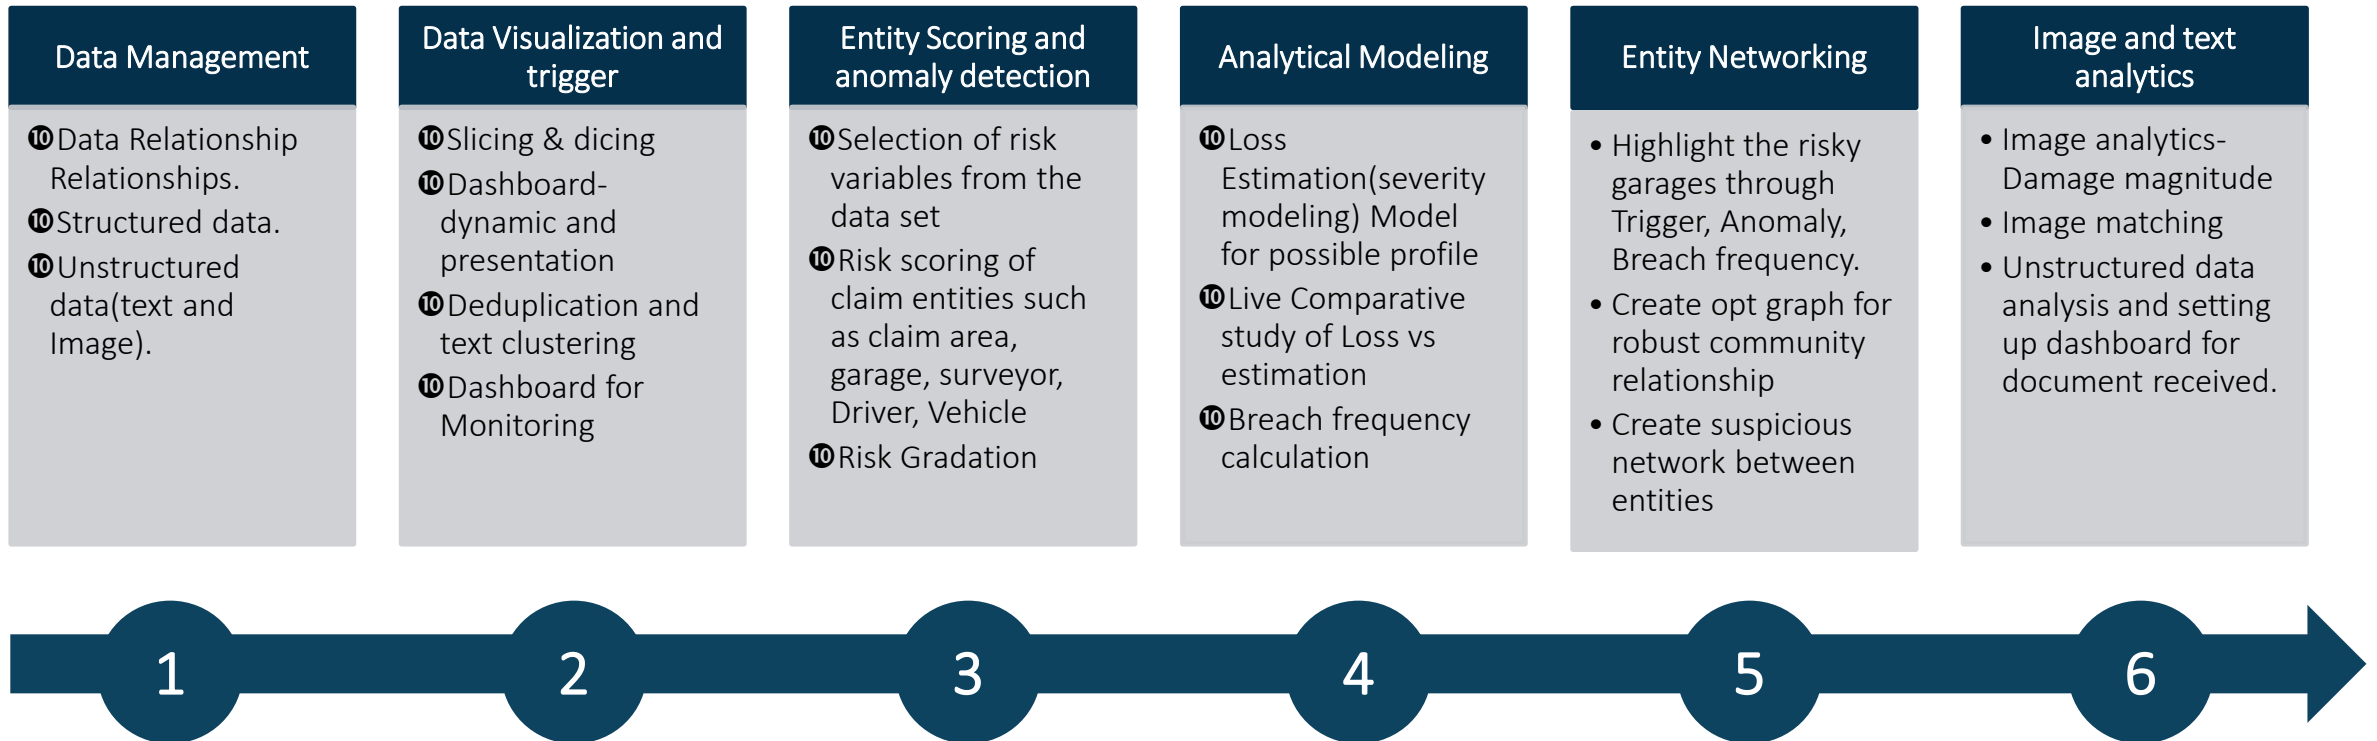

Robust analytics framework-Fraud Management

Analytics Implementation

Fraud Management-Steps for effective decision making

- Fraud Management is not only about data analytics, it is much beyond that. It is a group of activity where all the stakeholders of claim life cycle will have to contribute into so that fraud management system tends to get wiser by every day.

Chips of Fraud Management-A successful initiative

- Rare Diseases
- Uncommon Diseases
- One Time Procedures
- Age Gender Related Procedures
- Treatment Specific configuration such as repeated admission, dose regulations, chronic / acute diseases
- Seasonal Diseases
- Diseases by Geography

Policy Configurations

- Triggers to be Configured
- Risk Scoring of Private Hospitals by simulation of weight coefficient for risk variables
- Risk Score Ranges from 416 to 944 on a scale of 0 to 1000
- Reduction of false positive

Business Rules

- hospitals are Clustered into Clusters based Region, City Tier, Hospital Type (Private, Public), Specialty (Heart, Cancer, Both etc), Hospital Capability based on Bed Strength
- Anomaly Detection Rules comparing hospital behavior with Clusters. Anomaly comprises of Admission Rates, Package utilization, Treatment Costs los etc.

Anomaly Detection

- Fuzzy algorithm was used to calculate match score of demographic variables
- Analysis was extended further to compare TMS data on add member

Beneficiary validation

- Four Entities i.e Family, Beneficiary, Hospital and Treating Doctors are taken for analysis
- Identify Patterns of suspicious behavior of entities using Louvain Algorithm
- Networks comprising of # Cases amounting to INR # Crores were shared for investigation. Average value of the suspicious network is # Lakh

Network Analytics

- # Case were rejected and Reasons for rejections were analyzed
- # unique reason has been clustered into # group based on the similarity of the key words.
- Further these rejection reason has been categorized into fraud and abuse

Unstructured Data

- Predictive Models based on rejected Reasons
- Classification algorithms have been used to score the probability of the fraud based on the event rate on unstructured data.
- Fit statistics of the competing algorithm compare to decide the best fit

Predictive Models

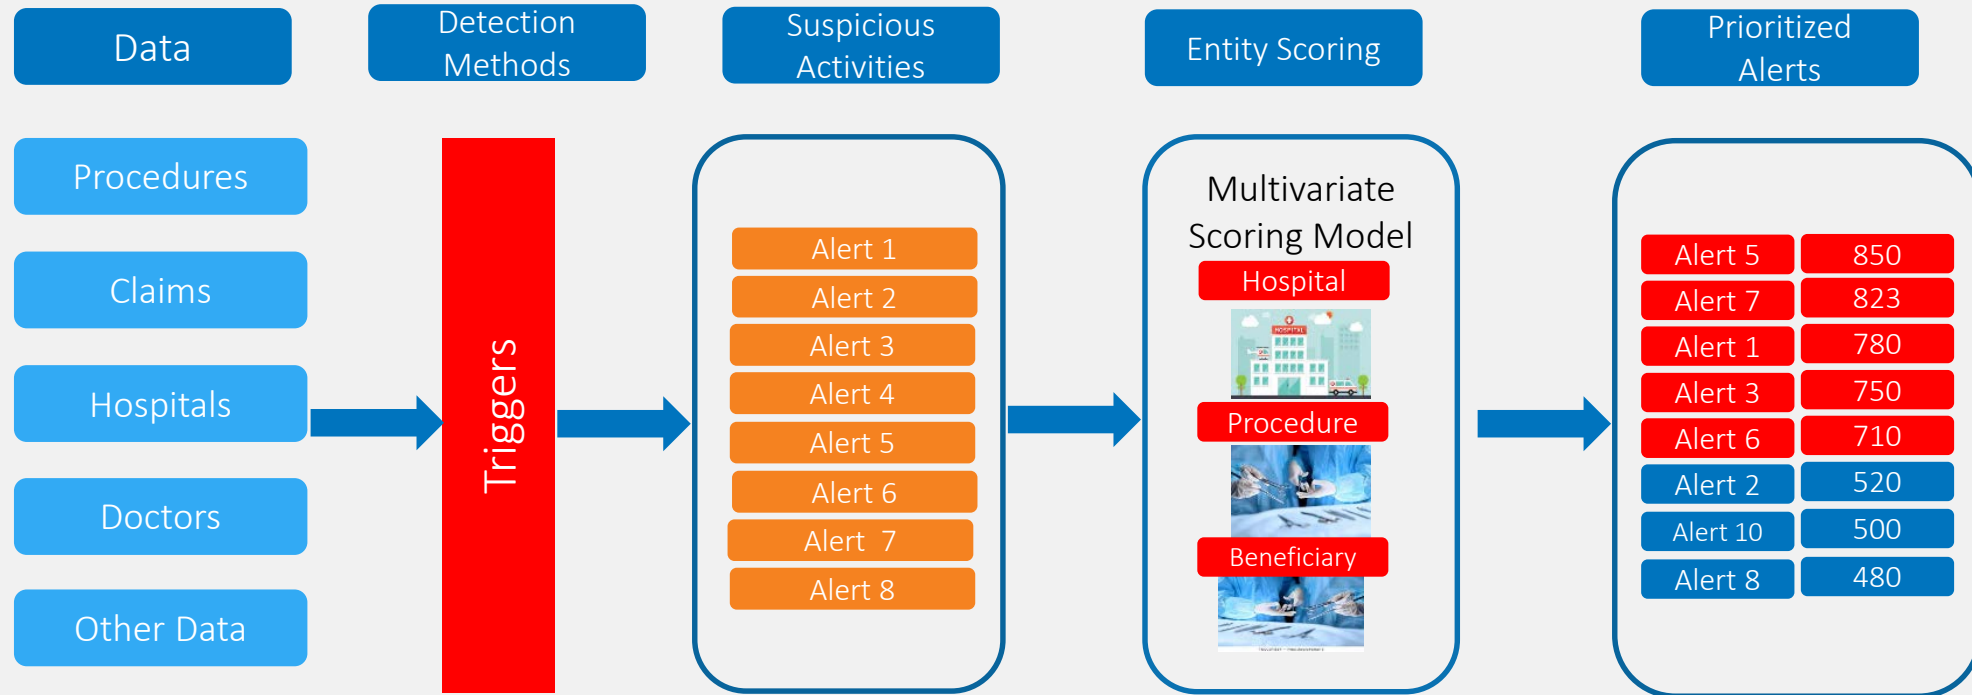

- De-duplication of the image and image comparison of patient.
- Reading the summary through OCR from Discharge summaries

Image Processing

Skeleton-Fraud Management system

Suspicious Cases

Case Management

The screenshot shows the 'Alerts' section of SAS Visual Investigator. At the top, there is a table with columns: Score, Alert ID, Actionable Entity Type, Actionable Entity ID, Alert Service Count, and Status Datetime. Below the table, there is a 'Scorecard' for alert HOSP27P78970, showing a score of 100 and a scenario 'Number of cases with Zero LOS'. To the right, 'Alert Information' is displayed for the same alert, including the name 'HOSP27P78970' and the entity type 'Hospitals'.

Score	Alert ID	Actionable Entity Type	Actionable Entity ID	Alert Service Count	Status Datetime
100	8523364200	Hospitals	HOSP24P01984	0	Jul 17, 2019 12:37:01 PM
100	19990932129	Hospitals	HOSP27P78970	0	Jul 17, 2019 12:37:01 PM
100	1288862117	Hospitals	HOSP27P78922	0	Jul 17, 2019 12:37:02 PM
100	22986966532	Hospitals	HOSP27P78950	0	Jul 17, 2019 12:37:02 PM
100	2911326478	Hospitals	HOSP27P78900	0	Jul 17, 2019 12:37:02 PM
100	6133258815	Hospitals	HOSP24P10865	0	Jul 17, 2019 12:37:02 PM

Risk Scoring

Hospital

Hospital Risk Score

- Over 8k Private hospitals, scored on a scale of 0 to 1000 based on 10 different variables.
- About 2% private hospitals has been designated as highly risky.
- Gujrat has 43 hospitals coming as highly risky
- 75% of the total risky hospitals are concentrated in four states that includes Gujrat, Tamilnadu, UP and Jharkhand

Procedures

Procedure Risk Score

- 1391 procedures have been scored on gradient based variables
- Around 3% of the procedures are changing rapidly over various metrics

Beneficiary

Beneficiary Risk Score

- 98% of the beneficiary are in low or moderate risk category whereas 2% of beneficiary portfolio is high risk

Geography Risk Score

- Himachal Pradesh, Bihar, Uttarakhand are the geography which are observing high risk score among all the states.
- Smaller states in north such as Jharkhand, Himachal Pradesh, Uttarakhand and states from north east has relatively higher risk score compared to bigger states.

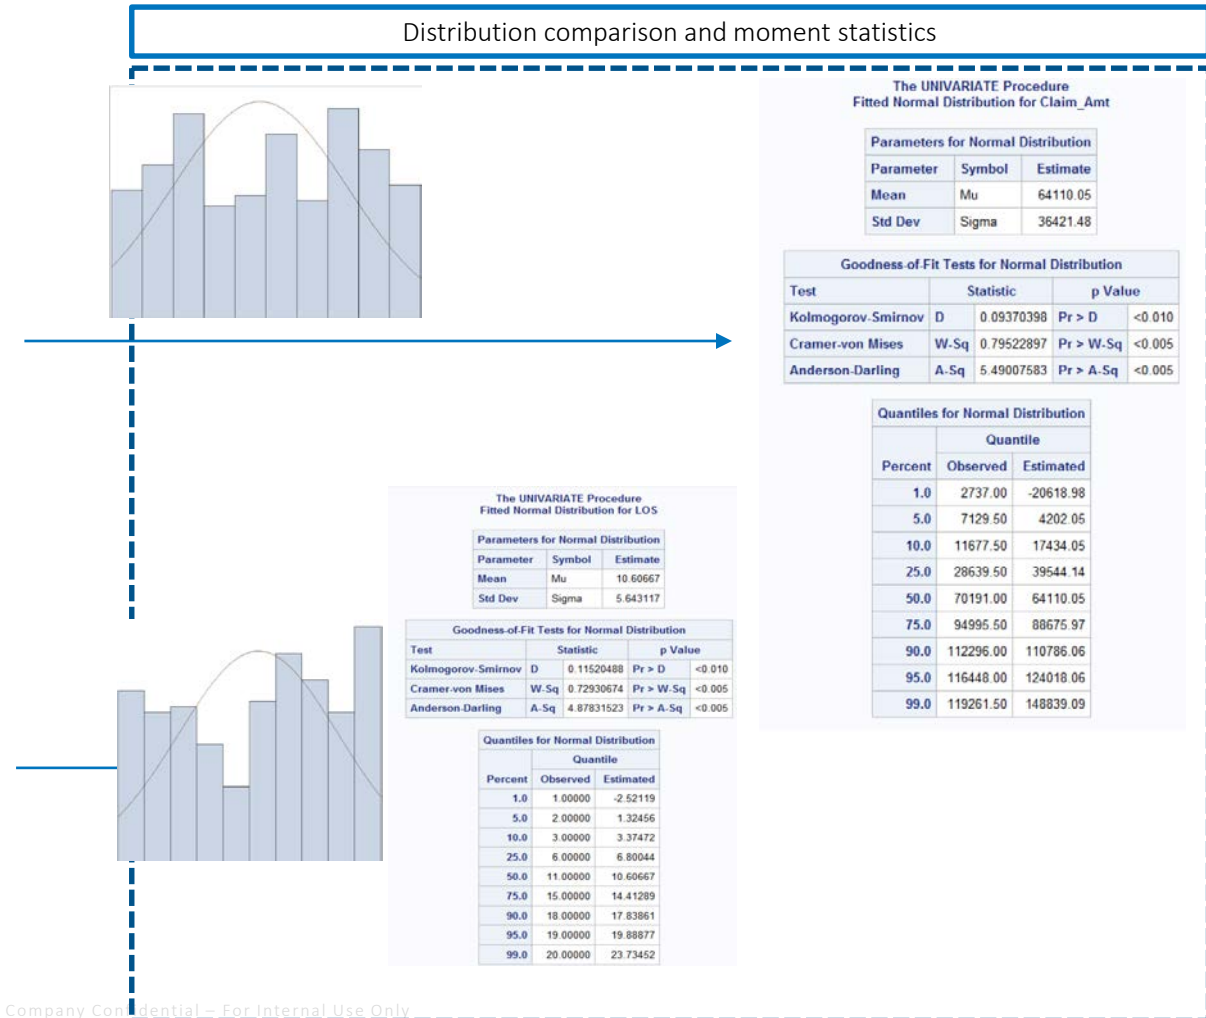

Geography

What Contributed to High Risk Score

- A Typical risk scoring process starts with identification of risk variables, testing its significance, symphatizing an equation and validating the equation for its ability to differentiate between high, moderate and low risk

Risk Scorecard

Variable	Gradation
LOS Risk Score	100
Claim Denied Risk Score	12
Death Risk Score	40
Enhancement Risk Score	100
Hi Admission Risk Score	20
Hi price package Risk Score	120
Hi utility Risk Score	12
Readmission Risk Score	80
Ticket Risk Score	240
Total Risk	704

Clustering-Rejection Reason

Cluster ID	Topics	Cluster Name	Category
1	reject +report +require +justify +query +chart OPD +block less +reply +investigation +admit reject payable +submit	Hospital could not justify line of treatment given	Fraud
2	hospitalization +justify +case OPD basis 'OPD basis' +admission +patient +treat HR +complete +approve 'bed capacity' bed capacity	Hospitalization was not required. OPD was enough for treatment	Abuse
3	+intimation +late +approval company insurance +require 'late intimation' 'insurance company approval' 'intimation insurance company approval' 'insurance company approval' insurance +eat +await 'IC approval' IC	Late intimation of the claim to the insurance nodal agency and claim adjudicator	Fraud
4	mismatch +package +diagnosis +select +treatment +disease 'disease diagnosis treatment' kindly +attach package correct +block hydrocele excision 'correct package'	Incorrect booking/selection of packages	Abuse
5	mandatory +document +reminder +process +'mandatory document' unable +reject repeated +query +'repeated reminder' +reply +hospital multiple +raise +'multiple query'	Mandatory document were not submitted despite repeated query/Reminder	Fraud
6	+case +reject +process unable +claim +note +discrepancy discharge clinical +treatment +summary +'clinical note' +surgery duplicate +overwrite	Discrepancy in admission and discharge summary	Fraud
7	date +process +case unable registration +admission delay +delay +hour +intimation +day IP discharge +register	Inconsistency in Claim date, admission date discharge date and claim intimation dates	Fraud
8	+claim +day +hospital verification rejection right subject appeal +deny 'case verification' +stand +'claim stand' ehcp +document guidelines	Document was either not submitted according to PMJAY guidelines or it was blurred and unreadable	Fraud
9	+package +reject +block wrong kindly +treatment 'wrong package' package medical +tooth single +raise incorrect +select +procedure	Similar/incorrect/wrong packages are being blocked for	Fraud
