PREPARATION FOR CAREER PATHWAYS FOR ACTUARIAL STUDENTS

Advanced analytics and big data are fundamentally changing actuarial work. Today's actuaries no longer have to follow the traditional methods, calculating reserves based on aggregate data patterns. Instead, robust software and vast computational power have unlocked new methods and models, including analyzing individual claim and policy data in real time.

For fresh graduates and the top actuaries in the field, this reality is the new normal - and the impacts of this change are being felt throughout the industry and beyond. Harnessing the power of these new technologies, actuaries are more in demand than ever before, taking on new roles, working for new types of firms, and shaping the innovation agenda.

Leaving many traditional areas behind, actuaries widening their scope of work and finding new spaces in the highly competitive employment market for risk and data professionals. The Institute of Actuaries of India is committed re-define and to disseminate the new role of actuaries among all their aspirants and also preparing to offer many training programs to their members to equip themselves to play their pivotal role in the job market both within and outside India, hence the program. Our specifically designed training programs offers skill development for students in R and Excel Modelling methods, data analytics and visualisation for Risk, Finance and Actuarial Decision Making.

The webinar will discuss types of opportunities emerged in the job market and additional requirements for an actuarial professional to find their important space in different domains, viz., insurance, re-insurance, Insuretechs, banks and financial services, off-shoring services, technology, data & analytics and consulting.

The discussions will cover the preparation required by the students to exploit employment opportunities in various core functions in the following domains:

- Life Insurance
- Annuities and Retirement
- General Insurance
- Health
- Banking Risk and Regulatory Reporting
- IFRS 9 and IFRS 17
- Data Analytics and Data Science
- Reporting, Visualisation and Automation
